QUELQUE CHOSE by Dmitri A. Borgmann

From A to Z:

1. Replace each letter of each word by its numerical position in the alphabet (A = 1, B = 2, ..., Z = 26). Then add the individual letter values for each word. You will find that no two of the words have the same total: the word totals range from a low of 39 for ANGEL to a high of 89 for YOUTH.
2. I used an 1869 dictionary merely to try throwing you off the track.
3. Arrange the word value totals in numerical order. You will find that 1 is in the 30s, 4 are in the 40s, 8 are in the 50s, 8 are in the 60s, 4 are in the 70s, and 1 is in the 80s. The number sequence 1-4-8-8-4-1 is a palindromic one.
