According to the Ninth Collegiate, onomatopoeia is the naming of a thing or action by a vocal imitation of the sound associated with it. There are more than one hundred onomatopoeic words in the Collegiate that exhibit this characteristic, identifiable by the use of the words NOISE or SOUND in the definition.

The purpose of this article is twofold: to suggest a taxonomy of onomatopoeia by relating the types of sounds depicted to the choice of vowels and consonants in the word, and to augment the Websterian collection with a large number of words for sounds that have been coined by comic-strip writers and illustrators from March 1988 to the present.

To avoid being overwhelmed by comic-strip material, I have limited the study to those sounds produced by inanimate objects, setting aside the many cries, grunts and other vocalizations emitted by comic-strip characters, both human and animal. However, this line cannot be drawn with as much precision as one would like, for there are many words coined to imitate such vocalizations as snoring, spitting, coughing, gargling, sneezing, sipping through a straw, vomiting, kissing, and the like.

Since comic strips often portray the misadventures of their characters, a large number of onomatopoeic words are required to describe impacts of the human head or body with its environment: falls, blows to the head, and the like. This has suggested a two-part division. This article describes the coinages associated with accidental (or purposeful) bumps, bangs and falls of both human and inanimate objects, including war and sports: things that go bump. The closely-related noises of friction and breakage are also included. A subsequent article will describe the coinages associated with the more-or-less normal noises of everyday life, in particular the technology associated with powered vehicles, appliances and common household objects: the daily grind. At the end of the latter article I give words for symbolic or faint noises that are rarely if ever actually heard.

Comic-strip coinages have been featured in Word Ways once before, in an article by John McClellan in August 1980; his listing of some 500 terms (from AAAA to Z-Z-Z) was alphabetic rather than taxonomic, and included vocalizations. In a related article, Maxey Brooke described how foreigners onomatopoecize one very special sound, the barking of a dog, in February 1975.

Turning now to a possible taxonomy of onomatopoeia, the Ninth
Collegiate words relating to things that go bump or scrape (but not splash) are presented below in a two-dimensional array with the pitch (frequency) of the sound on the vertical axis and the duration of the sound on the horizontal. A third characteristic, the loudness of the sound, appears to be less often recognized by the definitions; sounds characterized as "loud" are indicated by boldface, and faint ones by parentheses. The duration of the sound is often characterized as "sharp", "explosive", or "abrupt" or, if more extended, "resonant", "sonorous", or "ringing".

Using the definitions as a general guide, I propose a more specific taxonomy of sound pitch and sound duration based on the choice, respectively, of vowels and consonants. Most of the dictionary words are one-syllable, with an initial consonant (or cluster), a vowel, and a final consonant (or cluster). The vowels carry information about pitch, and, to some extent, loudness: E and I are used for faint high-pitched sounds, A for louder sounds of medium pitch, and O and U for sounds of low pitch that are neither especially loud or soft. The consonants carry duration information, for which I propose the following interpretations:

- initial T B P C CK; final P CK T: abrupt, striking wood, ground, human or animal tissue
- final NK: abrupt, striking metal
- initial W WH Z: object rushing through air prior to impact
- final NG: object striking metal which vibrates or resonates
- final MP: less abrupt, object striking something yielding
- initial CH R: less abrupt impact
- second L (as CL FL): echoic impact (not abrupt, having a brief extent)
- final SH: more extended impact; frictional contact
- initial S SCR SQ; final CH: friction between solids

This taxonomy can be illuminated by turning to the much larger corpus of comic-strip coinages. Some effort has been made to place similar sorts of bumps and falls under the same heading. The comic
strips from which the sounds have been taken are identified by single lower-case letters (see Appendix for codes).
