THE SIDE EFFECTS OF GOOGLE™

Many health-based websites that are easily accessible to patients provide information that is inaccurate, outdated, or misleading.

- Nearly 82% of people believe the information they found on the internet was better than the information from their health care provider.
- 32% of patients who found medical information on the internet obtained false or deceptive information.

Our Role as Health Care Providers

- Provide patients with easily accessible information, both on paper and in consultations.
- Accommodate patients with a low health literacy.
- Provide patients with reliable websites that they can use to find factual information.
