### N-TILE SCRABBLE RECORDS

KYLE CORBIN  
Raleigh, North Carolina

What is the highest score achievable by playing a given number of tiles in a single turn of Scrabble Crossword Game? As far as I know, no one has investigated the records for playing fewer than the maximum of seven tiles. But the majority of turns ordinarily encountered in Scrabble Crossword Game use only three to five tiles, not all seven. So after working on the seven-tile record for a few years, I decided to investigate the records for playing one through six tiles. I soon realized that these records were just as intriguing and strategic as the seven-tile record. Here's a summary of the records I was able to achieve:

<table>
<thead>
<tr>
<th>Number of Tiles</th>
<th>Points Scored</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>231</td>
</tr>
<tr>
<td>2</td>
<td>498</td>
</tr>
<tr>
<td>3</td>
<td>978</td>
</tr>
<tr>
<td>4</td>
<td>1247</td>
</tr>
<tr>
<td>5</td>
<td>1497</td>
</tr>
<tr>
<td>6</td>
<td>1729</td>
</tr>
<tr>
<td>7</td>
<td>1794</td>
</tr>
</tbody>
</table>

The word authority for six of the seven records is Webster's Third New International Dictionary. Only the one-tile record uses a different authority, Funk and Wagnalls New Standard Dictionary of the English Language. In the following paragraphs I present the seven records and the strategies used to create them. In the diagrams of the game boards, I use plus-signs to show which letters are played in the record turns, and I use asterisks to indicate blank tiles.

#### 1 Tile: 231 Points with HYDROXYBENZENE(S)

The one-tile record turned out to use a trivial strategy: simply play an S on a triple-word square, pluralizing two very long, high-scoring nouns. Hoping to avoid these trivial S curtailments, I first researched other curtailments and beheadments. (A curtailment is a word like QUART(Z) that remains a word with its last letter removed. Similarly, a beheadment is a word like (B)RA INSTORM that remains a word with its first letter removed.) But the S was just too formidable. No other letter came close to matching its score. So I set out to maximize the score for playing an S.

After searching promising sections of several unabridged dictionaries, I decided that Funk and Wagnalls' HYDROXYBENZENE(S) (43 points) was the highest-scoring curtailment. I teamed it with a 34-pointer to achieve the record shown below. The next best curtailments were: DIAZOHYDROXIDE(S) (40 points, Webster's Second), CZECHOSLOVAKIA(N) (38, Webster's Third), and REOBJECTIVIZE(D) (38, Webster's Second). Later, I discovered HYPEROXYSALICYLIC(S), worth 42 points, in the Random House Unabridged. (M)ETHOXYCARBONYL was the highest-scoring beheadment (37, Webster's Third).
For the two-tile record, I needed to play both tiles on triple-word squares, but there were several ways to do this. I could use a fifteen-letter word simultaneously beheadable and curtailable, like (P)REARRANGEMENT(S). I could use a word that would become two words when its first and eighth letters were removed, like (F)ACTION(A)LISTS. Or I could use a word that would become two words when its last and eighth-to-last letters were removed, like BOO(K)BINDER(Y). I tried all three approaches, scoring well

Words and scores: HYDROXYBENZENES 43x3 = 129, QUICKSILVERINGS 34x3 = 102.

2 Tiles: 498 Points with (X)ANTHOPHYLLITES

The thr...
with the words (P)REACKNOWLEDGE(D), (A)RHYTHM(C)ITY, WIN(D)-
JAMMER(S), and JOBBER(N)OWLISM(S). My best find, though, was
(X)ANTHOPHYLLITE(S), scoring nearly 500 points.
Words and scores: XANTHOPHYLLITES 33x3x3 = 297, MACQUEREAUX
31x3 = 93, SUBJECTIVIZES 36x3 = 108.
3 Tiles: 978 Points with (S)CRATCH(B)RUSHER(S)

The three-tile record was by far the most challenging and in-
triguing. Would it be possible to play each of the three tiles on
a triple-word square, forming a "triple-triple-triple" fifteen-letter
word? I thought it might, but I knew it would be hard to find
a suitable fifteen-letter word. The word would have to become two
six-letter words when its first, eighth, and last letters were re-
moved. I finally found such a word in Webser's Second: (P)RE-
COMB(I)NATION(S) (23 points). Words like this are so rare that
to date I've found only four more: (T)ROUBLE(S)HOOTER(S) (20 poi-
nts), (S)NIPPER(S)NAPPER(S) (17, using blank tiles for two of the
Ps), (W)HIPPER(S)NAPPER(S) (23), and (S)CRATCH(B)RUSHER(S) (27).
The last of these is the record-holder.

```
MYXOPTERYGIUM
TIC
ATCH
SH
K
I
L
O
W
A
T
ER
QUADRATOJUGAL
```

Words and scores: SCRATCHBRUSHERS 27x3x3x3 = 729, MYXOPTERYGIU-
UMS 34x3 = 102, ZEBUB 18x3 = 54, QUADRATOJUGALS 31x3 = 93.
4 Tiles: 1247 Points with (M)ETHOXY(C)A(R)BONY(L)

With four tiles to play, it was easier to find a suitable triple-
triple-triple fifteen-letter word. While searching my lists of high-
soring curtailments, I quickly found (W)A(P)ENS(C)HAWING(S)
(3 points). I didn't improve on this word until I found the 37-
point record-holder shown below.
Words and scores: METHOXYCARBONYL 37x3x3x3 = 999, ASHKENAZIM 28x3 = 84, CLAUSTROPHOBIA 22x3 = 66, PREJUDGER 20, QUADRAGE-SIMAL 26x3 = 78.

5 Tiles: 1497 Points with (D)(E)HYDRO(F)REE(Z)IN(G)

For the five-tile record, I hoped to use a fifteen-letter word worth about 50 points. But from my list of over 60 fifteen-letter words worth at least 44 points, I found only one that I could play using only five tiles. (D)(E)HYDRO(F)REE(Z)IN(G) was worth only 46 points, and when I played it as a triple-triple-triple, it scored nearly 1500.

Words and scores: DEHYDROFREEZING 46x3x3x3 = 1242, DEXTERV-SIONS 25x3 = 75, EMMAQUAS 19, FRIGHTFUL 19x3 = 57, ZEQUINE 35, GASTRONOMICALLY 23x3 = 69.
6 or 7 Tiles: 1729, 1794 Points with (O)(X)YPHEN(B)UT(A)(Z)ON(E)

OXYPHENBUTAZONE, the word used in the single-turn record I wrote about in the February 1983 Word Ways, can be played with either six or seven tiles. With six, simply play the horizontal A beheadment (A)JINGLE before the final turn, forming the vertical word UTA along the side of the board. Both the six- and seven-tile records use the diagram shown below.

<table>
<thead>

</tbody>
</table>

| D+ | RUGE          |
|    | O       |
|    | NED          |
|    | LQENTLY      |

Words and scores: OXYPHENBUTAZONE 54x3x3x3 = 1458, OPACIFICATIONS 23x3 = 69, XENATES 14, PREFORMATIVE 25, BRUSHWORKS 22x3 = 66, (A)JINGLE = 15), ZOOGAMETE = 31, ELOQUENTLY 22x3 = 66, ("Bingo" bonus = 50).

All words used in the above Scrabble Crossword Games are allowed by the rules for acceptable words. These rules were outlined in "High-Scoring Scrabble Revised" in the May 1981 Word Ways. They require that, in the game's dictionary, all words used be labeled with parts of speech or be inflected forms of words so labeled. For regular inflected forms, however, the rules say players should check the dictionary's explanatory notes. The relevant parts of Webster's Third's explanatory notes were printed in the 1981 article, but Funk and Wagnalls' were not mentioned. For completeness, Funk and Wagnalls states on page lxx that if "the plurals of nouns are not given, they are formed regularly, according to the simplest rules of grammar."

I invite readers to submit improvements to any of the above records and to find more examples of fifteen-letter triple-triple-triples playable with fewer than five tiles. Good hunting!
