At the 1981 convention of the National Puzzlers’ League, Harry W. Hazard presented a word contest called "Shrdlu". As a part of this contest, a list of words was given to the participants, each word having exactly five consonants. The objective was to find, for each problem word, another word with the same consonants in a different order; for example, one might replace shrdlu (if it were a word) with shoulder. Inflected forms, for example holders, were not acceptable. A variation on this contest is reproduced later in this article.

As a result of this contest, I wondered what consonant groups are the most prolific. To find out, I merged the Official Scrabble Players Dictionary with a list of compact (unhyphenated) entries in the Webster Vest Pocket Dictionary more than eight letters long, including inflected forms. I sorted the words according to their consonants, allowing the vowels AEIOUY to be used as often as desired; thus, the consonant group PR included such words as RuPe, PaRe, PuRe and RaP. The best groups are summarized here:

1 consonant: R 52, L 37, N 37, S 34, T 34, D 32, B 27, H 26, P 26, M 25, W 10, Q 7
2 consonants: RS 101, DR 74, RT 74, DL 71, LS 71, LR 68, MN 68, NS 66, PS 65, ST 62
3 consonants: RST 150, PRS 115, LST 109, DRS 102, DLS 101, LNS 96, NST 96, NRS 94, LRS 92, LPS 89
4 consonants: NRST 150, PRST 120, LRST 112, CRST 107, GNRST 107, DRST 104, MRST 101, RSTT 99, DNSR 94, GLNS 94
5 consonants: CNRST 103, GNST 98, CLRS 83, DPRST 79, PRSST 78, NRSST 76, NRST 69, MNRST 68, NPRST 67, LPRST 63
6 consonants: CDNRST 37, GLNRST 34, CNRSTT 30, GNRST 28, CNPRST 28, GNRSTST 28, CNRSST 27, GMNRST 27, CNPRST 26, GNRSTST 26, NFRSTT 26
7 consonants: CNRSSTT 13, CGNNRST 12, BCLNRST 11, CDNRST 11, CNPRST 10, CNRSTT 10, CGNNRST 10, CNPRST 10, CHNSSTT 10, CLNRSTT 10
8 consonants: CGNNRSTT 6, CNPRSTT 6, CDNNRST 5, DMNNRST 5, GNMRSTT 5, MNRSSST 5
9 consonants: CNPRSSST 3, DMNNRSTT 3, MNNPRSTT 3

Ten consonants is barely interesting, with a few pairs: contentedness, incontinentness; procrastinations, transcriptions; farsightedness, foresightedness; faithlessness, shiftlessness; harmlessness, humorlessness; motionlessness, simultaneousness; impressiveness, permissiveness. Eleven consonants has only the plural of the third pair above, plus some pairs based on variant spellings.

Now that the facts are in, the fun is over. What, however, is the answer to the question, "What consonant groups are the most prolific?" The answer is: the ones that occur most frequently in the English language.}

The following is a list of the most common consonant combinations, with their exponents:

- DL: 52
- LS: 49
- LR: 43
- RS: 40
- RT: 39
- DR: 37
- PR: 36
- NR: 35
- SN: 33
- PN: 32
- NRST: 30
- PRST: 28
- LRST: 27
- CLNRST: 26
- GNRS: 25
- CNRSST: 24
- GNRST: 23
- CNPRST: 22
- NRSTT: 21
- CNPRSTT: 20
- CNRRST: 19
- CNPRRSS: 18
- CNPRRSSST: 17
- CNPRRSSSTT: 16
- CNPRRSSSTTT: 15
- CNPRRSSSTTTT: 14
- CNPRRSSSTTTTT: 13
- CNPRRSSSTTTTTT: 12
- CNPRRSSSTTTTTTT: 11
- CNPRRSSSTTTTTTTT: 10
- CNPRRSSSTTTTTTTTT: 9
- CNPRRSSSTTTTTTTTTT: 8
- CNPRRSSSTTTTTTTTTTT: 7
- CNPRRSSSTTTTTTTTTTTT: 6
- CNPRRSSSTTTTTTTTTTTTT: 5
- CNPRRSSSTTTTTTTTTTTTTT: 4
- CNPRRSSSTTTTTTTTTTTTTTT: 3
- CNPRRSSSTTTTTTTTTTTTTTTT: 2
- CNPRRSSSTTTTTTTTTTTTTTTTT: 1
- CNPRRSSSTTTTTTTTTTTTTTTTTT: 0

In passing, the most common consonant pair is "PR", with 36 exponents.

The preceding exercise in the same vein as the above is a good one for the reader to work on. The number of possible consonant combinations is limited by the number of consonants available in the English language. For example:

1. shop
2. lack
3. wolf
4. coach
5. thorn
6. lect
As a part of our study, we have found consonants in English (if it please holders, produced last names) often as words as Used here:

- DL, H 26, P 28, GNRS, MN 68, LS 101, LNS 107, CRST 79, PRST 63, GNPRST 28, GNRRST 26, CDNRST 11, CNPRST 10, CLNRST 0, CNRST 11, DNNRST 1

Now that we have looked at the most productive letter combinations, what about the least productive ones? For three or more consonants, there will be many groups with no examples, especially in a lexicon as small as the one used here. For two consonants, there are seven missing entries: HQ, JQ, QQ, QV, QW, XX and ZZ. Five of these can be filled from NL, using Darryl Francis's "Monosyllabic Words" in the February 1979 Word Ways and Edward Wolpow's "Biconsonantal Words" in the August 1979 issue: JiQui, QuaQue, VeQuae, QuaW and ZooZoo. For the other two, Philip Cohen supplies XIX (Official Standard Names Gazetteer for Guatemala) from his unpublished trigram list, and a quick search of the OED provides HaQue (a variant of "hake"). You be the judge of the last-place winner.

In passing, there are twelve words in the "no consonant" category: aa, ae, ai, ay, aye, eau, oe, ya, yay, ye, yea and you.

The puzzle presented below is intended as a no-time-limit exercise in which the goal is to find as many words as possible with the same consonants as the problem word given. The non-inflection and reordering rules imposed by Harry Hazard are waived, but the reader should at least avoid forms of the same word (e.g., coachmen for the fourth one). The number following indicates the number of words found, but be warned - many are uncommon.

1. shopper 5 7. carbonic 13. galumph 1
2. lackwit 1 8. walnuts 1 14. pharmacy 1
3. wolfish 1 9. limerick 1 15. stowing 61
4. coachman 1 10. manners 3 16. cerebric 1
5. thonged 2 11. economics 2 17. unhitch 1
6. lectern 16 12. unnameable 1 18. prepack 1

The following consonant group network, constructed by the editor, shows how the best consonant groups are interrelated; the exponents indicate the rank of the consonant group among those of the same size.
