TWO-LETTER INTERJECTIONS

PHILIP L. POLLACK
Richmond, Virginia

It is a curious fact that a substantial percentage of two-letter words are interjections; of the 227 words in the "Dictionary of Two-Letter Words" issued by the Biliteral Society and reviewed in the August 1984 Word Ways, 52 can be so classified. The tables below, grouping interjections according to feelings, commands and statements, show the great variety of messages that can be sent.

Feelings

abhorrence FO

  - disapproval
  - in与发展
  - abhorrence
  - disinsection
  - defiance
  - derision

- AI
  - anguish
  - puzzlement
  - grief
  - dismay
  - pain
  - surprise
  - emotion
Editor's Note: Ignoring a few rarely-occurring interjections for feelings, I have arranged the remainder in an interrelated network on the preceding page. In it, a given feeling can be regarded as the sum of two or more component feelings, identified by arrows radiating from it. For example, pain (at the right) is denoted by AH, OH, O1 and OY; its components are pity denoted by AH, emotion denoted by OH, and despair denoted by O1 and OY. Note that AH (dislike, complaint, displeasure, pity, relief, satisfaction, threats) is a component of five different feelings, and surprise consists of four components.

LOGOLOGICAL SPACE

This is the English translation of the title of a new paperback on Dutch wordplay by Rudy Kousbroek, De Logologische Ruimte (Neulinhoff, 1986), available in the Netherlands for 29.5 guilders (about eight dollars). This 183-page book contains 33 chapters on a wide variety of logological subjects, from the activities of Oulipo, a French group of writers devoted to literary wordplay (Word Ways, May 1976) to Lee Sallows' remarkable pangram machine (Word Ways, November 1984). The first chapter, a literal translation of a Grimm fairy tale from Dutch into English, is hilariously reminiscent of the Portuguese-English phrasebook described in Kickshaws in this issue. One chapter is composed entirely of words like deeghouw (a tool used in paper manufacture) which are spelled in alphabetical order; another contains only words of one syllable (including quotations from Whales for the Welsh); a third inverts the traditional "A is for Apple" litany by transferring the letter to the end of the word (from "A is for Zorba" to "Z is for Abruz"); a fourth recounts an April 1st newspaper column advocating the respelling of Dutch words using only 13 letters of the alphabet. One delightful chapter, "There is an 'Albatros' in 'Ferdinand Bolstraat'", explores that odd juxtapositions resulting from transaddition. The only American logologist cited is Willard Espy, but he is given an entire chapter. From time to time, Word Ways plans to translate excerpts from this interesting and varied work.
