Iceman, crasher, penny-weigher, sniper, jackroller, screwman, hugger-mugger, thief: take a group of average Americans on a linguistic underworld tour of the South Bronx, and they would throw up their hands in despair at the unintelligible, fast-flying words that snipe from street corner to street corner. But leave the tourists there for a week or two, and even the most tongue-tied will begin to pick up the street jargon as they meet the local in-crowd.

But in Japan, criminal lingo is far more Byzantine: sub-rosa cliques of every shape and denomination use their own private language or agotataki (chin bangings), and no sooner has the visitor picked up Japanese pickpocketese than he or she must start again from scratch with car-heisterese, muggerese, or robber-talk.

An even bigger linguistic hurdle is the marked dialect differences in criminal speech. Tokyo prowlers, for instance, will often find that they have difficulty talking shop with out-of-town colleagues: in Tokyo, picking locks is called atetsukai (touch-using), or more arcane tanka tsuri (swearword fishing). In Wakayama the expression is hana o toru (taking the flower) and hana o konasu (handling the flower), while the Yamaguchi cliques use koburu (jiggering). Blow-torching locks, as one travels south from Tokyo, changes even more rapidly. Some regional gangsters call it aka (red), others fuki (blow), senkofuki (incense blowing), senbonfuki (blowing a thousand pieces), terikiri (burn-and-cut), or kamaboko (fish-paste).

With the tourist trade in Japan growing rapidly in the mid-nineties, American visitors find themselves venturing further afield into inner-city bars and local late-night groggeries. As they mingle with the local crowd they begin to ask themselves: what kind of criminal is a spider (kumo)? What does a fox master (inarishi) do for a living? How dangerous are the toddlers (chiko), the snip-snaps (choki), the dwarfs (chibi), or the bell-nests (kanesu)? And how do the nightingales (uguisu), the shrimps (kurumaebi), or the nest-floaters (ukisu) ply their trade?

The following multiple-choice selection is designed to test Americans' grasp of the ins and outs of Japan's criminal language. Japanese gang-slang expressions are presented in romanized transliteration, along with a literal translation. Following the Japanese gang word are four possible explanations. The correct answers are given in Answers and Solutions.

1. CHOKI (snip snap) A a pickpocket who uses scissors to cut into pockets, B a pickpocket who works in parks, C a pickpocket trainee, D a bag-snatcher

2. KUMO (spider) in black, C a thief who targets temp workers, D a wall trap for his victims

3. KANESU (bell eggs), B a specialist who targets temple workers

4. UKISU (nest) getting away, D through crowds, C a thief with a secret method

5. ICHIMAI MONO (a thief who regularly targets a particular type of jewellery)

6. DOSHI (kindred) a thief with a family name, C a murder victim

7. GANHARI (eye) a lock-picker, C a deserter

8. FUMITSUKERU (blows fingerprints, D a climber, B a thief)

9. TAKO (octopus) a thief who enters a house through arends, D a sneaker

10. SHIRIMAKU (shrimp) a thief who enters a house through a tree, D a sneaker

11. NYANZOKU (cat) A a thief with a trade, B a thief with a special trade, C a thief who targets temples

12. HARA-KIRI (stabs self) A an escape, B a thief who enters a house through a window, D a sneak

13. KABUWAKE (b原材料) A a thief, C aughs for money

14. BAIHARU (bandit) A a thief, B a thief who enters a store, C a thief who enters a house through a tree

15. AMERIKAN (American) A a thief, C a thief who enters a house through a window

16. KANE O TSU (gets away)
snatcher

2. KUMO (spider) A a thin spindly criminal, B a ninja-type thief dressed in black, C a thief who specializes in climbing walls, D a thief who sets traps for his victims

3. KANESU (bell nest) A a thief targeting rare bird-nests for their eggs, B a specialist in de-rigging alarms, C a safe-cracker, D a thief who targets temples

4. UKISU (nest floater) A a thief on a ship, B a thief who floats through crowds, C a petty thief who works at markets, D a prowler

5. ICHIMAIJIBAI (one sheet of individual) A a thief behind a screen, B a thief who regularly targets silk factories, C a thief who works alone, D a thief with a long criminal record

35. NAMAHAKU (cash-vomiter) A a rich-looking victim, B a thief who loses his loot, C a temple thief, D a bag snatcher

The Cambridge Encyclopedia of the English Language

In November 1991, Word Ways reviewed David Crystal’s *The Cambridge Encyclopedia of Language*, a wide-ranging overview of many different aspects of language. He has now complemented this earlier work with one focused more narrowly on the English language, logically organized around three great themes: history, structure (vocabulary, grammar, spoken vs. written) and use. Published by Cambridge University Press for $49.95, it is a handsome coffee-table volume of 489 pages, printed on coated paper with lavish use of color (for photographs, maps and diagrams as well as for background coloration of sidebars to set them off from the main text). One should not, however, dismiss this book as a gee-whiz-isn’t-English-wonderful romp. There’s an astonishing range of facts and figures to be savored (along with the occasional bit of fluff, such as a third of a page devoted to a charity event in which the entire Encyclopedia was read aloud).

Wordplay has been expanded from two to four pages, with references to Scrabble, word squares, anagram generators for the computer, Hangman, palindromes, univocalics and chronograms. Most examples are drawn from British sources. Word Ways readers will be interested in the 17x31 rectangle of presidential surnames (through Reagan), considerably inferior to the Feb 1994 Word Ways rectangle of 17x23 (including Bush and Clinton). Crystal views all wordplay through the prism of word games, either two-or-more-person games like Scrabble or games in which the reader matches wits with the constructor, as in cryptic crosswords. Would he regard logological research, such as the search for a ten-square or for that scrambled alphabet which maximizes the number of self-referential number names, as a game against Nature?
