ABSOLUTE DIFFERENCE WORDS

LONGEST WORDS

This article is a continuation of "Word Arithmetic" from the November Word Ways. Dmitri Borgmann in Beyond Language gave the four-letter absolute difference word FORM = 6 15 18 13 becomes 9 3 5 ICE. In "Difference Words" in the August 1971 Word Ways, Ross Eckler found in Webster's Collegiate 15 five-letter words such as SAFER and CHILD and three six-letter words from elsewhere: ELDEST, RETAIN, FRITOS. In "Difference Words Ride Again" in the August 1975 issue, Tom Pulliam added 10 more six-letter words from Webster's Unabridged, Second and Third editions.

I found the following number of source words, but many are obscure or imperfect (acronyms, especially for three-letter words):

<table>
<thead>

<th>7</th>
<th>6</th>
<th>5</th>

<tr>
<td>Number</td>
<td>2</td>
<td>20</td>
<td>157</td>
<td>1146</td>
<td>2957</td>

The following source and target words are all to be found in major dictionaries (OED, Web 2, Web 3, OSPD, Stedman's Medical Dictionary, Pulliam and Carruth The Complete Word Game Dictionary, American Heritage) or in past issues of Word Ways, or are proper names. A few which are of interest, but for which I have no respectable source, are indicated with a question mark. Acronyms are included at my discretion.

Length 5 (quintuplets)
HILDE/HILTS/JILTS/NOLDE/PORTZ all make ACHA, a word I have seen but sadly cannot source.

Note that some of the multiples (eg quadruplets) not presented would qualify as lesser multiples: eg KOTOS and MINIM both make DEED, hence a valid pair, even if MINIE and SOTOS could not be sourced convincingly. Thus, in an exhaustive sourcing exercise, some of the unquotted multiples may be downgraded, increasing the count of lower multiples, and decreasing the count of higher multiples.

Length 4: There is a huge number of words of this length, but very many use acronyms. The following examples use common words, and are sometimes apt

In "Difference Words" in August 1971, Eckler found the trees SLUG (or BIRD) - GIN - BE and GRIM - KID - BE. By extending these with the letter C, we may call these trees with a depth equal to the word length of four. Pulliam essentially extended this to five with SOFIA - DICH - EFE - AA and LOFTY - CINE - FEI - AD - C. (note that the first cannot continue to a single letter). In Making the Alphabet Dance, Eckler gave another example of depth five: BOXTY - MIDE - DEA - AD - (A). Here is a selection of the 203 such trees that I found, with emphasis on a common three-letter word or acronym. They are arranged in order of the two-letter words; some adjacent examples will be seen to belong to the same tree. Thus, BEA fans out twice to GIDE and GINO, and GINO in turn fans out twice. A few cannot end in a single letter.

Trees of depth 5 (selected, omitting final letter)

MONKS - BACH - ABE - AC
MENIE - HIED - ADA - CC
BIRDS - GINO - BEA - CD
UNSEL - GENG - BIG - GB
TONKS - EACH - DBE - BC
FELDE - AGHA - FAG - EF
WOPNE - HABI - GAG - FF
EGYPT - BRID - PIE - GD
AGLOW - FECH - ABE - AC
SOTHS - DELK - AGA - FF
HOTFE - GINO - BEA - CD
JINKS - AECH - DBE - BC
ONSEN - AENT - DIE - ED
FELTS - AGHA - FAG - EF
FURZY - OCHA - LEG - GB
DEYDE - ATUA - SAT - RS
OINKS - FECH - ABE - AC
PIRNS - GIDE - BEA - CD
BIDRY - GENG - BIG - GB
CHILD - EACH - DBE - BC
EXION - SOFA - DIE - ED
ONGON - AGHA - FAG - EF
BONDS - MAJO - LIE - CD
FEYDE - ATUA - SAT - RS

It might rightly be assumed that there are very many trees of depth four. I found 2093, though as with most numbers quoted in this article, the count is highly dependent on the acceptability of mainly two-letter and three-letter words. Because of the volume, we will comment only on the fact that branching is very common at this level. I found one fanout of 11, three of 10, and eight of 9 branching out from a three-letter word. Here they are:

BD, ACG, ABEL/DEHA/HILE/KLIP/NORK/NORY/POLE/POLS/PORK/PORY/TURK
BD, ECG, CHEL/GLIB/JEHO/JOLE/NILE/NILS/PURY/TOLE/TORK/TORY
BE, ECH, CHEM?/GLIA/GLOW/INKS/JOLT/NILD/TOLD/TOLT/WROG/WROW
DD, AEA, HIDE/HINO/NOTS/NOTU?/ONST/POTS/POTU/STON/STOP/STYX
AD, BCG, GILE/GILS/KILE/MOLE/MOLS/MORK/MORY/SURY/TRUN
BB, ACA, ABED/BADE/IHED/KLOP/NORS/POLK/PORS/SURV/TURS
CD, BEA, CAFE/EGBA?/GIDE/GINO/KIDE/KINO/MOTS/MOTU/SUZY
DA, GCD, ELIE?/HOLH/HOLP/HORN/IPSO (facto)/NURN/SLIE/SLIM/UNKO
FB, CIG, BENG/BENU?/FIRK/FIRY/HENG/LIRK/RULE/SPYR/TWNG
GB, BIG, ACLE/ENG/GENU/GIRK/KIRK/SULE/TRIB?/TRIP/WULE
GE, BID, GENJ/GIRN/KIRN/PRIE/PRIM/SULP/TREI/TRIM/WYPT
JJ, AKA, BALK/BALM/HITS/NODE/ONYX/OPED/PODE/STIH/TSHI

Here are trees of depth four, again omitting the single-letter root, chosen for the familiarity of the three-letter and at least one four-letter "word" (and keeping other branches).
Our trees are rarely very tall, but sometimes bush out alarmingly! Nevertheless, little simulacrum of trees with branches at multiple levels do exist: ABE comes from both BACH and FECH; though BACH comes only from MONKS, FECH comes from both AGLOW and OINKS (of course, Bach has nothing to do with oinks!).

**PALINDROMES**

A palindromic source word with an even number of letters cannot have a target since the central two letters must be the same. There therefore cannot be a normal tree of palindromes, though branching exists (see especially MAAM):

**ABABA, AAAA; STOTS?, AEEA; DEKED, AFPA; DELED, AGGA; DEWED, ARRA; STATS, ASSA; MINIM, DEED; SOTOS?, DEED; OTATO, ESSE; MAPAM, LOOL; ANONA, MAAM; REDER, MAAM; REFER, MAAM; ANANA, MMMM; HUHUUH, MMMM; SEDES, NAAN; SAPAS, ROOR**
