

SUPER HEAVYWEIGHTS (PART 2)

REX GOOCH

Letchworth Garden City, Herts, England

rexgooch@ntlworld.com

In "Super Heavyweights (Part 1)" in the November 2004 issue of *Word Ways*, I presented words and phrases with letter sums of 355 through 501 (setting A=1, B=2, etc.). In this article, the continuous run is extended to 547, but samples are given for many numbers above this (including 666!), with the expectation that readers will fill some gaps. Perhaps many could be filled (with varying degrees of satisfaction) by using the plurals of existing items; also, previous writers have often taken a noun (e.g., ending -tomy), then tacked on various verb endings.

For a discussion of the criteria used to select words, the reader is referred to the introduction of the earlier article. Entries give the weight of the item, the number of letters in the item, the item, and its source. Place names, except where stated, are from the NIMA database, and their positions are given in degrees and minutes, latitude and longitude. I have used a Medical Dictionary found at <http://books.md/>. NA means the Columbia Gazetteer of North America. OED? indicates a few chemicals that I found in the OED in 2000, but was unable to verify using the new CD-ROM search software. BIW refers to the *Book of Interesting Words*, and RSH is the *Ring Systems Handbook*.
