

ADDING DIGITS

SUSAN THORPE

Great Missenden, Buckinghamshire, England

thorped@hotmai.com

Much has been written on the result of assigning the letters their alphabetical values (a =1 to z = 26).

The values of the letters of a word can then be subjected to one or more of the four functions + - x ÷

Sometimes this throws up oddities such as DUCK (4+21+3+11) = DRAKE = (4+18+1+11+5) = 39.

All four functions can be used to show that BROMINE is element number 35:

$(2 \times 18) + (15 - 13) - (9 \div \sqrt{[14 - 5]}) = 35$ (*Elementary Equations*, Word Ways Nov. 2015 p263).

Below, by way of contrast, the emphasis is on the added value of individual digits.

The individual digits of the values connected by dots are all added together.

The individual digits of a 2-digit value without dots are also added together.

The words below ultimately produce:

(a) like digits (b) palindromic digits (c) tautonymic digits

(a) LIKE DIGITS
