Haiku Palindromes

TIM HEATH
Wantage, Oxfordshire, England
timheath@btinternet.com

Love’s Return
Red Rose does revere
Volatile babe lit a love,
Reverse ode’s order.

Pleasurable palindromes
The moment of elation when draft wordplay finally crystallises into a finished palindrome is, most likely, an experience common to all palindromists. With disorder tamed and symmetry restored, it’s time for a rest and a beer.

Red Ale
Red now for a beer,
Fasting is a sign it’s a
Free bar of wonder.

Or is it? The temptation often arises to extend the work by insertion in the middle, or addition to the ends. So when is it time to stop? This is just another way of asking what makes a good palindrome. With palindromes, there is of course only one unbreakable rule: it has to be reversible; no almost or nearly, and no grey areas. Beyond this rule, the criteria are subjective, but some commonly reported guidance includes:

• good grammar and spelling;
• avoiding excessive use of:
  o acronyms and abbreviations
  o apostrophes for unusually omitted letters
  o given names; and
• maintaining a constant theme or themes and, conversely, avoiding random or meaningless hopping from one topic to another.

Inspection of the list shows that what should be pursued is simply high-quality natural writing that happens to have an added symmetry feature. However, anyone who attempts such a pursuit soon becomes aware that maintaining a constant theme in a palindrome is in itself an arduous task, and it takes on an
added level of difficulty when the first two criteria are imposed. The competing constraints of symmetry, theme and grammar come into ever greater conflict the longer the palindrome. Consequently, and despite their skilful construction, lengthy palindromes can require so many sacrifices that they often become almost impenetrable.

Those who, by experience, find the essence of this analysis familiar may well agree that shorter palindromes are more satisfying in both their construction and their reading. The conflicting requirements are not fully removed, but sharp edges are blunted by brevity. So, short palindromes may be a sensible aim, but why attempt haiku? Doesn’t this just add to the constraints?

Haiku

**Changing Seasons**

Liven mutual
Like summer, a harem muse
Kill autumn evil.

Formal haiku comprise three lines containing a total of seventeen syllables in a 5-7-5 pattern. They commonly have a turning point in tone or meaning, usually at the end of the first or second line, and traditionally have a reference to nature or the seasons. In modern haiku the constraints are often relaxed. (The Wikipedia entries for “haiku” and “haiku in English” provide a good introduction to the form.)

Haiku palindromes

The formal haiku structure does indeed add further constraints, which add to the challenge. But it also enforces the selected preference for brevity. In addition, there is a fortuitous synergy arising from the imposed line breaks of poetic forms. This helps to separate the juxtaposed, staccato-sounding phrases and clauses that often arise in palindromes. The haiku form also relaxes the constraint of having full sentences.

I have found few previous examples of whole-haiku, letter-unit palindromes with a 5-7-5 structure. One by Dmitri Borgmann and reported by Howard Bergerson was previously published in Word Ways [18(3), 171-178, 1985]:

```
Smart Nora, alert
Saws goldenrod-adorned logs.
Wastrel Aaron trams.
```

The haiku palindromes presented in this article generally conform to the 5-7-5 syllable structure. A title is given to each palindrome, following the approach described by Saltveit [Word Ways 46(2), 131-133, 2013] for palindromes arising in first annual SymmyS awards. This may be unusual for haiku, but is useful in the case of palindromes, because it establishes the theme or helps to unite disparate themes. Except for Borgmann’s example above, all palindromes here are original, so far as could be determined by checking common sources and performing web searches. Some further examples are given below.

**Decomposition**
Saga’s reviled tips,  
Secret Exeter cesspit  
Delivers a gas.

**Poetic Licence**
Toil estimate met,  
A loss, so late-met, am I  
T.S. Eliot.

**Ivory Towers**
Aimed a casual cat  
Nastily lit Santa Claus,  
Academia.

**Brexit Dilemma**
“No” in unison?  
No, it’s EU question  
No sin – union.

**Munich Olympics**
Red now for a tsar,  
Eve aglow, Olga ever  
A star of wonder.

**Silent Noir**
Demi-monde trap miss  
I kill, agog, all I kiss  
Imparted? No mimed.

**Denigration**
Reviled if I live,  
Mistress asserts I'm evil  
If I deliver.

**Valleys Romance**
Wonder erases  
Or I adore hero Dai,  
Roses are red now.

Some of the listed criteria for good palindromes are not fully adhered to in the above examples, and the sharp-eyed may have noticed that Brexit Dilemma has only six syllables in the second line. But that’s OK, palindromists don’t mind having their words thrown back at them.
The words of a particular sentence all contain the same bigram.

The bigrams are made respectively of A, E, I, O and U, plus another letter – starting with N.

**AN**, **EN**, **IN**, **ON**, **UN**

ORANG UTANGS CAN MANAGE FANTASTIC ANTICS, HANGING, STANDING AND BALANCING ANYWHERE

A Sam Loyd Puzzle Solution?

LORI WIKE
Salt Lake City, Utah

I have a proposed solution for the “Sam Loyd Puzzle?” query posed by Will Shortz in the February 2016 issue of Word Ways. I think that the four “C”s can be interpreted as “forces.” This leads to a possible rebus solution of “The forces overtake and surround the enemy.”
CONSTRAINED STINKY PINKIES

ANIL
Perth, Australia

JEFF GRANT
Hastings, New Zealand

A stinky pinky* is defined in Dave Morice’s *Dictionary of Wordplay* (2001) as a two-word rhyming phrase such as *flower power*. Web3 and Random House give it a more narrow definition as a game or puzzle in which a phrase is redefined by another made up of words that rhyme, e.g., foolish horse = *silly filly*. Dave (*ibid.*), and more extensively Ross Eckler (WW, August 2011 p. 166), give examples of stinky pinky “buzzwords” where a person redefines a term from his or her occupation by a stinky pinky. For example, a coroner defines dying of lung cancer as *choke on the smoke*. (Ross extended the definition to include connecting words in the rhyming phrase.)

We wondered what is the longest stinky pinky with no connecting words and no letters shared by the two words. We offer a dictionary phrase and a coinage:

**busy Lizzie** (10 letters), the impatiens plant;

**choo-choo queue** (13), a child’s description of a line of people waiting to board a train.

We then sought a further constraint, no repeat letters anywhere in the stinky pinky. We found ‘*Bok’ Jacques* (10), athlete’s nickname, especially a high-jumper. A bok is any S.African antelope. By realising Jacques can sometimes be spelt Jacque, we improved it to

**Springbok Jacque** (15 letters), a redefinition of “jumping jack”, the calisthenic exercise. The springbok is the jumping (pronking) antelope.

[Anagram: **Springbok** pronks big! — Anil, *Definitive Anagrams*, in prep.]

Both of these, as well as busy Lizzie, rely on proper names. Our next quest was for the longest stinky pinky with no repeat letters and containing no proper names? Our best was a coinage, **sleighe foray** (11), sled journey or raid.

Some consider stinky pinkies should only join two words with the same number of syllables, thus rejecting choo-choo queue, Springbok Jacque, sleigh foray, and one of Ross’s (*ibid.*) Out best in this narrowest of definitions is again a coinage,

**sleigh tray** (10), Santa’s food holder or serving platter.

Can readers better us in any of the above categories?

* “Stinky pinky” is also the name of an obscene game (Urban Dict.), which we don’t offer to play.
In 1963, Victor Borge, the Danish-American humorist (1909–2000), introduced one of his two most famous language routines, inflationary language. (The other was phonetic punctuation.) At that time, he observed that anything that had to do with money was going up — except language. Because the English language has so many numbers hidden in words like wonderful, before, and create; he inflated all these numbers to meet the economy — "to rise to the occasion." And so, to be prepared for the rising inflation, he suggested that we add one to each of the embedded numbers so that before became "befive," wonderful was promoted to "twoderful," and create to "crenine." He renamed California "Califivenia."

Now, fifty-five years later, the language still mirrors the devaluation of the dollar; still echoes the sad fact that we now get less for our money; still prepares us "to stoop to the occasion." In the following recessionary story, numbers and letters deflate instead of inflate, and any word that has a comparative element is changed to its lower or lesser counterpart. Embedded numerical homonyms are not affected. Here's a story of a day at the beach that illustrates how my recessionary language would sound.

I hopped into my souped down 3 x 3 Ford V-7 RTU (SUV, in better days), picked up my better girlfriend, and drove to a 4 & 9 cents store to buy a bathing suit for me and a monokini for her. We then single-timed it to a 6-10, grabbed some 6-Up for our fourth of whiskey, and headed for a picnic at the beach. After cooking a juicy S-bone steak over an open fire, we settled back, turned on my h-pod, and watched the minitude of humanity pass by. There was the usual parade of sun-baked monokinis and bulging monoceps strutting their stuff. After the sun went down and the crowd went home, we became engaged in some serious threeplay. Things were looking down. I was in sixth heaven.

To our surprise, her quarter-brain w-boyfriend showed up, started spewing 3-letter words at us, and kicked sand in my face. He was wearing a San Francisco 48'er shirt and was accompanied by a nasty looking J-8 who raised his hind leg and o'd on our blanket. Judging from the beast's size, it had to be a Good Dane. It took but a split first to realize that the guy was already two sheets to the wind and packing a five-shooter. Putting one and one together, I realized that this one-bit jerk meant to put me 5 feet under. It also didn't take a fifth sense to clue me that I was behind the seven ball and had to do something on the single. Lucky for me, a 5-pack of Colt-44 beer was within reach. I grabbed a bottle and let it fly toward his tooth. This caused him to do a 179 and, with both inches, I kicked him in his gluteus minimus, forcing him to do a 2-point landing head second into the sand. This was our better chance to get away. I gave his three-legged friend our steaks and we low-tailed it out of there. As soon as we were off the beach, we called 8-0-0 to report him to the police and we sicced the dog ounce on his canine accomplice.
A word ladder is a link between two given words in which each rung is obtained from its predecessor by altering exactly one letter in it. As an illustration, one way in which APE can evolve into MAN is via the chain APE → APT → OPT → OAT → MAT → MAN.

The fifteen common phrases offered below require similar constructions. The first dozen ladders connect pairs of four-letter words, while the final trio asks for a bridge between two five-letter words. Answers are not unique.

1. AMEN to THAT
2. CALL to DUTY
3. CASH to BURN
4. DUSK to DAWN
5. HEAD to TOES
6. HERE to STAY
7. MADE to LAST
8. RICH to POOR
9. SHOT to HELL
10. SLIM to NONE
11. SOUP to NUTS
12. WILL to LIVE
13. DRIVE to DRINK
14. SCARE to DEATH
15. TAKES to HEART
1. AMEN → OMEN → OVEN → EVEN → EVES → YES → DYES → DOES → TOES → TOSS → LOSS → LOST → COST → COAT → CHAT → THAT
2. CALL → CULL → DULL → DULY → DUTY
3. CASH → BASH → BUSH → BUSY → BURY → BURN
4. DUSK → MUSK → MASK → MASS → MAWS → LAWS → LAWN → DAWN
5. HEAD → HEED → TEED → TEES → TOES
6. HERE → HERD → HEAD → HEAR → SEAR → STAR → STAY
7. MADE → MALE → MALT → MAST → LAST
8. RICH → RICE → MICE → MILE → PILE → POLE → POLL → POOL → POOR
9. SHOT → SLOT → SLAT → SEAT → SEAL → SELL → HELL
10. SLIM → SLID → SAID → SAND → BAND → BOND → BONE → NONE
11. SOUP → SOUR → SOAR → BOAR → BEAR → BEER → BEES → BETS → NETS → NUTS
12. WILL → FILL → FILE → FIVE → LIVE
13. DRIVE → DROVE → GROVE → GRAVE → GRACE → TRACE → TRUCE → TRUCK → TRUNK → DRUNK → DRINK
14. SCARE → SCARS → SEARS → HEARS → HEATS → HEATH → DEATH
15. TAKES → CAKES → CASES → CASTS → COSTS → COATS → BOATS → BEATS → BEARS → HEARS → HEART
WHAT’S SO KEY ABOUT THESE 8-LETTER WORDS?

Darryl Francis
Brampton, Cumbria, England
darryl.francis@yahoo.co.uk

The main list below contains 80 words and names, mostly taken from familiar reference works (such as Webster’s Second and Third Editions, and the Oxford English Dictionary), although there are some US placenames sourced from the internet. The supplementary list has a further 145 names – these are foreign placenames, foreign surnames, and the like, mainly to be found on the internet – all pretty obscure and unfamiliar. I believe the full set of 225 words and names is probably the (almost) complete set of words and names with a particular property. What is the key property? The property is not shared by words of less than eight letters or more than eight letters.

Adjectives often come in positive/negative pairs, or antonyms, such as well/unwell, correct/incorrect similar/dissimilar. But there are some notable gaps in this pattern. Youngsters have fun recreating the terms couth (correct but obsolete) and gruntled (incorrect: if grumd ever existed, disgruntled would not have been its opposite). There is no lack of other examples in common speech. For instance, why can’t some Chinese be scrutable, and why can’t my appearance (still) be kempt? Much the same happens in the case of -ful/-less adjectives where the pattern of pairs like careful/careless and harmful/harmless is broken by such ‘singletons’ as peaceful, plentiful and priceless. Also, even where pairs of opposites appear to exist, the words are not always truly opposite in meaning, sometimes because of multiple meanings in one word of the pair (easy, scramble, invalid ), and sometimes because of a natural divergence in usage (im/pertinent, infirm, infamou). Again, in cases like hopeful and hopeless the context plays a part: when applied to situations the words are opposite, but when applied to people they are far from it: if I am hopeful, I have hope, but if I am hopeless then others have no hope for me. Another example is the use of unfold in its intransitive: the unfolding of a story is not the opposite of the folding of a theatre production. Also far from opposites we have the pair im/passive. Then there is the possibility of a downright dangerous misunderstanding where an apparent opposite is nothing of the kind – in/flammable.

The notion of ‘opposite’ is itself a bit vague, ranging from logical contradiction to attaching a prefix or suffix to an existing word to denote a significant difference. Just how involved things can get is illustrated by words derived from sense. To start with, there are several meanings of the word: we have the physical senses of sight, hearing, smell, taste and touch: then it can mean meaning: and in matters of thought and expression it denotes good sense and also awareness and feeling. Take the word sensible: its common meaning is having good sense. So - is its antonym insensible? No: that usually means rendered unconscious. Senseless is more of an antonym, though that too can mean unconscious (even if senseful does not exist to pair with it). Sensible, as in ‘I am sensible of your concerns’, leads to sensibility, whose opposite is – of course - not insensibility, which means unconsciousness. A closer antonym is insensitivity: but sensitive and insensitive as a pair are not perfect, because if I am sensitive I get upset easily, while if I am insensitive I am likely to upset others. At the physical level there is in/sensate, which leads to sensation and un/sensational! Finally (?) there is nonsense which is the opposite of good sense and also the opposite of what is meaningful. Is that clear now?
Apart from *nonsense*, the prefix *non* yields *nonentity, nonchalant, nondescript, nonplussed*. When hyphenated, the prefix is readily attached to nouns, adjectives and participles: examples are *non-fiction, non-compliant, non-aligned*. One more negating prefix is *a-/an-* with words from the Greek: here too there are ill-matched pairs, such as *a/pathetic, an/aesthetic, a/gnostic*.

With the *-un* words the prefix is predominantly equivalent to just using the word *not*. But there are good reasons, of course, for creating a one-word negative. One is that it would be clumsy to say ‘I am in a not happy mood’, or ‘Such things are not not usual’. Also, an adjective can be turned into an adverb: could one say ‘not doubtedly’ or ‘not waveringly’? The *–un* prefix generally produces well-behaved pairs, though with a few oddities: *undue* is opposite to one meaning of *due* but only in the sense of being too much, not too little: *uneath* and *uneathly* lack real opposites: and to *unpick* is not the opposite of to pick. Many of the negatives are formed from the past participle passive, such as *unbroken, unpaid*, but ambiguity still exists when *un-* is applied to the verb itself: a verb of action when so negated means to reverse the action of the positive verb: we have to *undo, unfold, unload, unlock* and so on. If I am told ‘That door has been unlocked’ I assume someone has come and unlocked it, but if I am told ‘That door has been unlocked for years’ then I think that it has been in a not-locked state for years, or even could have been like that from when the place was built.

Where ‘singleton’ adjectives don’t have an opposite half, there is often good reason: if I am not legless (in either sense of the word), would I describe myself as *legful*? And if an event is not fateful, would one call it *fateless*? The suffix *–less* often means ‘totally without’, but in other cases it just points towards one end of a sliding scale (like we can say ‘not unhappy’ to indicate neither extreme). However, sometimes the missing opposites could in principle exist or be revived, as in the following anecdote: -

As a rather trepid person I have tried to be clueful in matters of home security. But the other day I looked down and saw an intruder coming up the stairs. His expression was fathomable nocuous and nocent – here was a man determined to go away full-handed. He grasped my arm and said ‘You are pecunious. Where are the valuables?’ I felt resourceless rather than defenceful, but then something toward happened. My free hand brushed against a slim glass vase on the window ledge. This made a wieldy weapon and I swung it at his head. He fell back down the stairs, still gripping my arm and I collapsed on top of him. On reaching the bottom, he was clearly scathed, whereas I was the hapful victor. I still held a broken piece of glass in my hand and, though too ruthful to do him more damage, I kept it ready in case he became senseful before the police came. The vase was not valueful, and the blood stains on the carpet would be delible, so on the whole it was a woeless experience.
State Name Limericks
Bill Brandt

Using the names of states to create word games used to be popular, for example: What did Idaho? She hoed her Maryland. I have put all the ones I could think of into limerick format. I realize that limericks may have gone the way of buggy whips, but I am always hopeful some day they may make a comeback. In any case, I hope you enjoy them.

She gardened in the sand,
Was working hard there, and
We really want to know,
Just what did Idaho?
She hoed her Maryland.

With children she had one,
A boy with siblings none.
The boy was looking wan.
So where has Oregon?
To see her Wisconsin.

At dinner she had fun,
But when the day was done.
The scale had the last say.
Just what did Iowa?
She weighed a Washington.

With an invitation to tea,
And told to arrive around three.
She didn’t have time to spare,
So what then did Delaware?
She wore her New Jersey.

She wanted to be free,
And sailed out on the sea.
Now I don’t want to pry,
But how did Florida?
She died in Missouri.
We saw her at the spa.
She went there with her ma.
A glass was in her grip.
And what did Mississipp(i)?
She sipped a Minnesota.

Brass cars cost lots of dough,
Old or new gas to make them go?
So the question I want to ask ya,
Which gas for my Nebraska?
Only the New Mexico.

Callie’s living with her ma,
Got a gift phone from her pa.
So what I want to ask ya
Is why did California?
If you don’t know, Alaska.

The scene was pretty raw,
But not against the law.
Your testimony’s key,
Just what did Tennessee?
She saw what Arkansas.

I had a coat, the color tan,
Getting it ripped was not the plan.
It won’t matter one iota,
Can anyone sew Dakota?
Probably Michigan.
Every word has a total of 2 vowels. The 2 vowels are different. They can be anywhere in the word except adjacent to each other.

In the word pairs listed, the vowels under consideration are supplemented by like consonants in the same positions in each word eg MAVIS MOVES which has a bonus because it makes sense!

In some word pairs, the same 2 different vowels occur in reverse order. These are shown in **bold**.

THE NORWICH BUMSTEAD DIVINATION

by Jeremiah Farrell

The effect: The subject secretly chooses one of the fifteen letters in the name NORWICH BUMSTEAD. The magician then asks the subject to separate the five colored cards into two piles; one that contains the words that have his chosen letter in them and the other that contains those words that do not have his letter.

Even though the magician does not know which pile is which, he is quickly able to discern that subject’s choice by a mere glance at the mystic NORWICH BUMSTEAD diagram.

The method: The mystic diagram can be thought of as a torus, or doughnut shape, by bending the half-red upper edge over to join the half-red lower edge, and then joining the half-blue ends to form the torus. This need not actually be done, of course, since it is easy to imagine that “A” is connected to the “B” via a blue edge, or that the “W” is connected through a red edge to the “S”, and so on. With this proviso, every letter (and Norwich himself in the lower right-hand corner) is connected to exactly four other letters by crossing one of the four colors Red, Blue, Yellow or Green.

When the subject separates the five colored cards, the magician simply notes the colors in either pile. He mentally traces the colors in that pile, starting from the Norwich square in the lower right. If the white card is in his chosen pile, the magician makes a (unique) diagonal jump over one square to account for it. For example, suppose Red, Green and White are in one pile. From Norwich the magician crosses Red to “R”, Green to “W” and then does the White diagonal hop to land on “U”, the chosen letter. Had he traced the other pile instead, i.e., Blue and Yellow, he could have gone Yellow to “C’ and then Blue to “U” reaching the same spot. It is worth noting that the colors in any pile may be traced in any order; they will always locate the same letter.
NORWICH BUMSTEAD DIVINES ALL!
COLLOQUY

DARRYL FRANCIS comments:

“Have just seen the February Word Ways online. Another good issue.
I have already emailed Jeff Grant to point out a further alphabetic trigram ....
LONGHIRST is a village in Northumberland, England. Probably just over an hour's
drive from me! “

Also “Have also emailed Jeff Grant to say that ...

Rhinopomastus exists on the internet
It appears to be a genus of African birds.
That's two new items to add to Jeff's list. I wonder if there are more to be found.”

BRANDON ALDRIDGE writes:

My name is Branden Aldridge, and I have found a new world record for the shortest panalphabetic
window. In the article "Panalphabetic Windows in Literature" by Michael Keith, published by Word Ways
in the February 2001 edition (v. 34, No. 1, pp. 74), the author describes a computerized search of Project
Gutenberg, and reports the shortest panalphabetic window he found was a 535-letter stretch of text in
Honore De Balzac's "The Alkahest".

I have recently performed another search of Project Gutenberg, analyzing over 48,000 books, and have
found a 408-letter panalphabetic window in the book "Thirty Years' View (Vol I of 2)." by Thomas Hart
Benton. The window occurs in Chapter XCVIII, Mistakes of Public Men. It is shown below, with all letters
converted to lowercase, except for those forming the alphabet in the panalphabetic window, shown in
triple brackets:

the politicians were to make the panic, by the alarms which they created for the safety of the laws, of the
constitution, the public liberty, [[[And the puBlieC money: anD most zEalously did each division of
the combination perform its part, and for the lonG period of tHree full months. the decision of the
resolution condemning general JackSon, on which aLi this MachiNery Of distress and Panic was
hung, reQuiRed no part of that time. there waS The same majority to vote it the first day as the last; bUt
the time was wanted to get up the alarm and the distress; and the Vote, When taken, was not from any
eXhaustion of the means of terrIfYing and agonIz[ ]]ing the country, but for the purpose of having the
sentence of condemnation ready for the virginia elections--ready for spreading over virginia at the
approach of the april elections.

One observation of this window is that it only contains one name, Jackson, which is a rather common
name, and the windows contains no abbreviations, unusual proper names, foreign language words, or
obscure words.

NOTE: The book "Thirty Years' View" can be obtained from Project Gutenberg at the following link:

http://www.gutenberg.org/cache/epub/44851/pg44851.txt

The Word Ways article “Panalphabetic Windows in Literature” can be retrieved at the following link:

https://digitalcommons.butler.edu/cgi/viewcontent.cgi?article=4542&context=wordways
Secretly choose any letter from the title and then place the four words into two piles, one with your letter choice on them and the other not on them. Show me either pile and I will name your letter using the Hatter’s magic cube.

Please DREAM about how this is done and tell me later.
How to use the Magic Cube

There are precisely 8 different letters in the title and can be found in "Mad Hatter’s" alone. When the colors of a pile are known, the magician notes them and beginning on the "S" (for Start) traces them on the edges. If he runs into a node that does not have a color he needs to trace on it. He makes a big diagonal jump to another node and continues.

Two examples. Suppose the subject chooses the letter A and therefore forms the two piles Red-Blue and Yellow-Green. From the first pile, starting on the S we hit R then end on A. From the second pile we start on S go Yellow to M and since there is no Green at M we diagonally hop to A.

Suppose instead the subject chooses H. The two piles will be Blue and Red-Yellow-Green. Since S has no Blue edge we diagonally hop to end on H. On the other hand, tracing Red, Yellow and Green, in any order, will also end on H.

The diagonal hops are SH, MA, RT and ED.

If S is chosen then only one pile can be formed rather than two but the procedure still works. The letters of NIL are each used twice to fill out the four four-letter words but of course can never be chosen.
A couple weeks ago I asked correspondents who were going to watch the Olympics to take note of which way the figure skaters did their spins--clockwise vs. counter-clockwise. After the first night you probably realized this was a loaded question--all 30 of the skaters spun counter-clockwise! Throughout the next two weeks of the games, I saw only two skaters who spun clockwise: Carolina Costner of Italy, and Bronze Medalist Kaetlyn Osmond of Canada.

On one day I watched which way skiers turned coming to a stop after their Giant Slalom runs. Twenty one out of 22 turned left.

The bias cannot totally be due to handedness (or "sidedness"). The portion of lefties in society is estimated to be between 7% and 10%, but the portion of clockwise skaters was only 2.8% (5 of 176 performances that I tallied).

##

The human animal, through all times and all cultures, is and has been a right-handed species. Whatever its relation, I have noticed in my studies of asymmetries that whenever humans move in a circular path they overwhelmingly do it counter-clockwise.

Consider: running tracks, auto race courses, speed skating, bicycle velodromes, baseball, roller derby, horse races, dog races, revolving doors, Whirling Dervish dancers, ballroom dancers around the dance floor, and chariot racers (as recreated in the Ben-Hur movies). The directions on a Hula Hoop were to hold the hoop against your back and push forward with the right hand, thus setting the hoop and the hips in a counter-clockwise rotation. At public ice- and roller rinks, they make you skate counter-clockwise.

In a survey of college students I found that the vast majority said that they walked or would walk counter-clockwise around a lake, an island, a supermarket or a county fair. I have been told that the rents at fairs are higher for booths to the right of the midway, to capitalize on visitors' tendencies to turn right after entering, to start a counter-clockwise circuit.

As seen from the north, as is customary, Earth spins counter-clockwise around its axis, (as do all the planets in their orbits around the Sun). This Earthly rotation indirectly results in Northern Hemisphere tornadoes and hurricanes spinning the same way. It is often claimed that water drains counter-clockwise out of bathtubs, sinks and toilets in the Northern Hemisphere, and clockwise in the Southern. In fact, water flows out of most sinks in the same direction it flowed in. The reason is that the Coriolis "force" (really an "effect", not a "force"), which is supposed to cause this, is almost immeasurably weak and is overpowered by the slightest current. In ideally motionless water the molecules at the south side of the sink are slightly closer to the Equator than the molecules at the north side; hence they are traveling a slightly larger circle around the
Earth's axis every day; hence they are moving through space slightly faster than the molecules at the north side of the sink! That's how weak the bathtub vortex is.

When I was once preparing a paper on the counter-clockwise phenomenon, and the complete absence of clockwise counter-examples, as far as I could tell, I asked three prominent anthropologists how this came to be--Irven DeVore at Harvard, Bernard Campbell at UCLA, and Sherwood Washburn at Berkeley--and they all gave me the same answer. Not,"Oh, that can be traced back to such-and-such", as I had hoped, but,"Hmmm. You know, I have never noticed that before."

I don't know of anyone else who has ever noticed that before.
DAY ONE? WAY DONE!
More Transposition Puns and Spoonerisms, Original and Otherwise

DON HAUPTMAN
New York, New York
donhauptman@nyc.rr.com

Each morning, two daily newspapers are delivered to my apartment door. Usually, this routine is performed efficiently. But on one occasion, they didn’t arrive. I called the service and, in late afternoon, both papers were redelivered. Then my doorman handed me the original missing papers—four days later! Most likely, they were left in the wrong place and subsequently discovered and turned in. I hate waste, but I immediately discarded the now-useless duplicates. I reported the matter to the delivery service, wryly concluding: “Better never than late!”

Soon afterward, I told the story to my pal Mardy Grothe, the authority on literary and historical quotations (see www.drmardy.com). He responded: “I’m afraid George Bernard Shaw beat you to the punch.”

Mardy appended this passage from Never Let a Fool Kiss You or a Kiss Fool You, his 1999 book of chiastic wordplay:

“Early in his career, the struggling young writer George Bernard Shaw submitted a play to a well-known London producer, who flatly rejected it. Several years later, the same producer sent a telegram to Shaw—now a successful playwright—saying he was, after all, interested in producing the work. Shaw cabled his reply: ‘Better never than late.’”

The quip has since become popular. An Internet search generates tens of thousands of matches in, among other contexts, sports reporting, titles of movies and TV shows, and admonitions deployed by business coaches.

Here are more punny reversals. As usual, where I was anticipated, I have appended notes at the end of this article.

- Favorite cocktail of Arctic explorers: Polar Sour.
- Advice for beachwear marketers: Hawk to the tanned.
- Dinner theater: Food with your play.
- Maxim of crony politicians: It is better to court the PACs than to pack the courts.
- Appropriate name for instant polenta: Soft-Pour Corn.
- Murder mystery set in a wildlife preserve: The Last Scoundrel of the Refuge.
• Welcoming exclamation of card players: *All decks on hand!*  
• Slogan, landscaping service for duck hunters: *This will really mow your blind.*  
• Line of packaged meals for geeks: *Nerd’s Best.*  
• Distress call for oil-drilling catastrophes: *Eek! Frackcident!*  
• Old Testament commandment: *Layeth the sword, sayeth the Lord.*

Following are a few real-life instances of transpositional humor, drawn from recent personal experiences and news events:

• A friend requested my assistance with a wire transfer. I was charged $50 for the transaction, but the bank officer promised to credit my account as a courtesy. I was tempted to exclaim: “Fee waiver? We favor!”

• At a restaurant in Washington, D.C., the check arrived with a card reading “The Breakfast of Champions.” I proposed to the manager that it would be more persuasive to tweak the classic cereal slogan, touting the eatery’s chefs as “The Champions of Breakfast.”

• A movie playing in theaters as I write is titled *The Leisure Seeker.* One wonders if it will inspire a sequel about a hospital whistleblower: *The Seizure Leaker.*

• In an e-mail exchange with an economist about the controversial Obama-era monetary policy of “quantitative easing,” I quipped that the Age of Reason had been replaced by the Rage of Easin’.

• Last year’s widely reported kerfuffle involving an assault on Senator Rand Paul by a neighbor, following a bizarre dispute about their lawns, suggested this possible headline: “Blowing Leaves and Leaving Blows.”

Finally, a longstanding debate in the spoonerism community (if such exists) concerns the question of whether coined reversals must make sense. Of course, it’s preferable when they are meaningful. Still, for ages, people have been saying things like “One swell foop” and “Why don’t you go where you’re watching?” Such expressions are nonsensical, but that doesn’t diminish—and may even enhance—their amusement value.

While pondering this conundrum, I wondered why T-shirts and coffee mugs displaying the words “As Tarp as a Shack” abound for sale online. The phrase is meaningless, except perhaps to hillbilly architects! Then I realized that the objects thus festooned are intended as gag gifts for older people, communicating a message that humorously refutes itself.

*Credit Edit: Googling generated no matches for many of the above specimens. Re the following, I was anticipated, though the contexts usually differed. Corn: breweries. Refuge: interestingly, all from U.K. Decks: multiple previous uses, for skateboard auctions and other purposes. Champions: video games, rock groups, others. Earlier citations also found for: Play, Nerds, Blind.*

ALPHAMETRICS

Edited by STEVEN KAHAN

Please send solutions and proposals for new puzzles to
Steven Kahan, 78-51 220th Street, Hollis Hills, New York 11364

51.2.1 Doubly True – 1 by Andrzej Bartz, Fuerth, Germany

\[ \sqrt{N I N E} + \sqrt{F O U R} = S I X - O N E \]

51.2.2 Doubly True – 2 by Andrzej Bartz, Fuerth, Germany

\[ (T W O + T W O)^2 + (S I X - O N E)^2 = (O N E)^2 + (T W O)^2 + (S I X)^2 \]

51.2.3 Up In Smoke by Andrzej Bartz, Fuerth, Germany

\[ A \times L I T T L E \times P O T = I S \times S O O N \times H O T \]
(Please solve in base 12.)

51.2.4 Worldwide Cruise – 1 by Paul Boymel, Potomac, Maryland

\[ F I J I \times W A L E S = M A L A Y S I A \]

51.2.5 Worldwide Cruise – 2 by Paul Boymel, Potomac, Maryland

\[ M A L I \times O M A N = E T H I O P I A \]

51.2.6 A Capital Idea ! by Frank Mrazik, Montreal, Quebec

\[ \text{THE} + \text{STATE} + \text{CAPITALS} + \text{ANAPOLIS} + \text{CHARLESTON} + \text{CONCORD} + \text{DES} + \text{MOINES} + \text{HARTFORD} + \text{HELENA} + \text{LANSING} + \text{LINCOLN} + \text{MADISON} + \text{PIERRE} + \text{RALEIGH} + \text{RICHMOND} + \text{SACRAMENTO} + \text{SALEM} + \text{SANTA} + \text{FE} + \text{SPRINGFIELD} + \text{TRENTON} = \text{TALLAHASSEE} \]
(Solve this one in base 16.)
SOLUTIONS TO ALPHAMETICS, Vol. 51, Number 2

51.2.1 Doubly True – 1  by Andrzej Bartz, Fuerth, Germany
\[ \sqrt{2025} + \sqrt{1369} = 407 - 325 \]

51.2.2 Doubly True – 2  by Andrzej Bartz, Fuerth, Germany
\[ (204 + 204)^2 + (136 - 459)^2 = (459)^2 + (204)^2 + (136)^2 \]

51.2.3 Up In Smoke  by Andrzej Bartz, Fuerth, Germany
\[ 1 \times 240023 \times A60 = 47 \times 7669 \times 860 \]

51.2.4 Worldwide Cruise – 1  by Paul Boymel, Potomac, Maryland
\[ 6484 \times 10935 = 70902540 \]

51.2.5 Worldwide Cruise – 2  by Paul Boymel, Potomac, Maryland
\[ 4025 \times 9406 = 37859150 \]

51.2.6 A Capital Idea!  by Frank Mrazik, Montreal, Quebec
\[ 739 + 67879 + c8407816 + 8ee84f106 + c38a1967fe + cfecfab + b96 + 2f0e96 + 38a7dfab + 3919e8 + 18e60e5 + 10ecf1e + 28b06fe + 409aa9 + a819053 + a0c32feb + 68ca829e7f + 68192 + 68e78 + d9 + 64a0e5d091b + 7a9e7fe = 78118386699 \]
THE TEA PARTY

By Stephen Bloom and Jeremiah Farrell

Four coins are used in Tea Party magic. First of all, secretly toss one coin and it will now show up which of either heads or tails stands for Yes while the opposite side will stand for No. The magician will not know which is which.

Now choose, again secretly, one of the four characters at the tea party. The depictions are those drawn by the original artist J. Tenniel.

Trick 1. Secretly choose one of two quirks. “Convivial” and tell the truth to four questions or “Contrary” and lie to all four. Place four coins on the four colors according to your appropriate quirk answering the question “Is your chosen character here?”

Trick 2. Chose now between three quirks: “Convivial”, “Contrary” or “Confused”. If you choose “Confused” alternately answer true, false, true, false OR false, true, false, true in the order pink, blue, green and yellow.

For either Trick tell the magician on which colors the heads occur. The magician can quickly name your character even not knowing your quirk or whether heads means Yes or No.
AT THE

TEA PARTY
How to determine the character.

On the circular table regard the top and bottom colors to be either pink or green on both. The left and right colors are both either blue or yellow.

Starting at the Mad Hatter on the circle trace either Heads or Tails on the colors. You will always end at the chosen character no matter what quirk was chosen.
An old riddle asks, “Can you name a word with three consecutive double letters?” One possible answer is WOOLLEN - ‘double U, double O, double L, …’ A more satisfying solution is BOOKKEEPER (or BOOKKEEPING), the only common words with a consecutive triple double.

In compiling this list of words with consecutive double letters we have included not only dictionary words and words found in Internet texts, but also proper nouns (mostly place names), some foreign words and a number of the best contrived terms. A selection of personal names has been listed, but only where multiple (20+) examples have been found. A more extensive search would doubtless uncover a large number of extra names, but verification is often problematic. Thanks to Dave Morice for coinages from his inspirational Kickshaws piece ‘The Moonnookkeeper and the Toollooter’ (Word Ways, May 1999), and to Anil for his recent contributions.

Excluded are hyphenated words like COOL-LOOKING, BALLOON-NET (lace) and SLEEP-POOR, two-word terms such as BARROOM MAN and CAREER ROOM, apostrophised terms, eg COFFEE’LL (coffee will), exclamations (mainly) with multiple identical letters like GRRRRRR! and AAAAAH! and website/app names, eg SCHOOLLOOP and COOKKEEPBOOK.

Also omitted are erroneous forms like BALLOONNEER (ballooner) and strained coinages such as VACCUUMMOOING, cows in space, or the sound of a worn-out vacuum cleaner?

**Threes**

AALLAAKH town in Russia. (Geo)
AANAAKH in ‘Sgag AANAAKH’, town in Russia. (Geo)
AASSAA also, in dialectic Norwegian. (PDicon)
ALLAALLA town in Indonesia. (Geo) A nice palindrome!

KOOKKOOKKAI given name recorded 20+ times. (Names)
LAPPEELLAAN flat, in Finnish. (Net)
NGOORROOTT Aboriginal word for 'sky', from Lake Wellington area, Victoria, Australia. (The Aborigines of Victoria, Vol 2, R Smyth, 1878, p92)
NONOOKKEEPER one who is not a NOOKKEEPER. (C)
NONNUUNNAAY as in a 'NONNUUNNAAY resident', someone not from NUUNNAAY, Somalia. (C)
PEESSEEKK surname recorded 20+ times. (Names)
POORROOMMATE someone sharing a POORROOM. (C)
PUUTTEELLINEN defective, in Finnish. (Net)
SUBBEERROOM beneath BEERROOM bar in St Petersburg, Russia. (C)
SUBBOOKKEEPER an assistant bookkeeper. (Web2)
SUPERROOMMEET a particularly big ROOMMEET. (C)
TOORREESS surname recorded 100+ times. (Names)
UNDERROOKKEEPER an assistant ROOKKEEPER. (C)
WOOGGOODDY WURROONG well in Western Australia. (Geo)

Fives

BABOONNOOKKEEPER zoo worker in charge of the baboon enclosure. (C)
BEERROOMMEET meeting in the BEERROOM bar. (C)
BOOBBOOKKEEPER an incompetent bookkeeper; person in charge of the BOOBBOOK network. (C)
BOOTTOOLLOOKER cobbler who has misplaced a BOOTTOOL. (C)
FLOODDOORROOM room with a FLOODDOOR. (C)
LIIKKEESSAAN showroom, in Finnish. (Net)
LOONNOOKKEEPER conservation worker in charge of loon nesting sites. (C)
SHEEPPOOPPEEVED annoyed by SHEEPPOOP in the wrong place. (C)
SPOONNOOKKEEPER one who looks after a cubby-hole where spoons are kept. (C)
WOOLLOOKKEEPER nightwatchman at the shearing shed. (C)
WOOLLOOMMOOLOO original spelling of WOOLLOOMOOLOO in a 1793 land grant, according to the Australian Encyclopedia (1956). [see Word Ways, May 1977, p114]

Sixes

BALLOONNOOKKEEPER someone in charge of the balloon cupboard. (C)
BUFFOOONNOOKKEEPER one who is responsible for ‘clown corner’. (C)
MOOHHAAMMEEDD dubious extended ‘Mohammed’, recorded 11 times as a surname. (Names)
RACCOONNOOKKEEPER zoo worker who looks after the raccoon enclosure. (C)
SUBBOOBBOOKKEEPER assistant to the BOOBBOOKKEEPER. (C)
VOORRAADDOOSSPULLEN  things you keep in a supply box, in Dutch. (Net)

Sevens

FLOODDOORROOMMEET  meeting in a FLOODDOORROOM. (C)
MOONNOONNOOKKEEPER  one who keeps house in a nook on the moon at noon. *(Language on Vacation, D Borgmann, 1965)*
WOOLLOOMMOOLOO  early spelling of WOOLLOOMOOLOO used twice in *Description of a View of the Town of Sydney, New South Wales*, by Robert Burford, 1829. (Net)

A TERMINAL WORD is derived from, in order, the first and last letters of the first word and the first and last letters of the second word of a two word phrase.
Thus the terminal word STAY can be derived from SHUT AWAY (shown as STAY – SHUT AWAY).
The terminal words are shown in alphabetical order read across the page.

As the 3 words together make sense, my favourite is PATS - PYJAMA TROUSERS
MEAN SIDEWALKS

ANIL
Perth, Australia

More miscellanies, no thread. SIY. As M.S.[4] noted (Feb’18), I’ve dropped numbering these.

• QUIBBLING
I don’t like to quibble... Well, actually I do. I freely admit it now I realise that quibble originally meant a play on words, a pun. We pundits and pun-nits quibble with spellings and meanings and interpretations. A healthy skepticism, which unfortunately makes some people physically sick.

• MILLION MILE MILLIPEDE MILLENNIUM
Million mile millipede millennium is, first of all, the technical term and standard unit for how far a millipede can travel non-stop in 1000 years. Symbol: mmmm.

Secondly, it’s the planned Celebration for the heroic millipede after it completes the million-mile thousand-year trek. It will include a very large prize for this selfless Hero of Science.

Superhero, actually. I calculate the millipede must travel at about 5cm/s without pause for the whole millennium to reach a million miles and define 1 mmmm. It’s the right magnitude for averaging 1.0—an enlightening coincidence for the linguists at the Bureau of Standards.

These four words came up during my search for strange bedfellows (sb. ’10-150), curiosities and surprises of etymological relationships. These obviously related mills fail as sb’s. I just jotted them down because my muse dictated. (She’s a bit weird at times, often embarrassing me.)
I pass them on for poetic charm and scientific interest.

• another UNI-VERSE: a short story with a linguistic twist

Screw-Driver
Sam the Hiver paid a skiver
(a conniver and fast jiver Taxi Driver)
his last fiver for a river!
(Tho a striver, poor Sam Hiver
is no thriver or survivor!)

Poor Sam, lacking any sense of rhyme, in a typical email-type scam, thought he was buying a huge stream, a river, but was instead buying a river, a splitter off of his money by a splitter with it.

• DEEP THEOLOGICAL REVELATION (a mean sidewalk into murky water)
It’s often asked whether people who lived in the time before Jesus brought Salvation were doomed to go to Hell. The answer is No, they all got reincarnated. The reason Jesus came was that, as the world population grew, Heaven ran out of its 170 million quality reusable souls. So God created eternal mortality, ended reincarnation, and issued cheap non-recyclable eternal souls thereafter. This also cut down on the paperwork. Hell was a waste bin for undesirables, to keep Heaven clean. Lost sinners must pine for the good old days before God ruined it all. Well, it wasn’t all God’s fault. We helped a bit in causing our population explosion. The answer, yet again, is 42! (x170m)
• A PASTORAL NOVELLAGRAM

**Cottage**
Get a cot,
cage, tot,
goat, etc.

*(Get 0 cat!)*

• COINCIDENTAL NUMERICAL PALINDROME
During the Australian Open (tennis, 21/1/18), Nick Kyrgios lost to Gregor Dimitrov by a score of 7-6 7-6 4-6 7-6. Ironically, and rather amusingly, Kyrgios won an equally thrilling previous match against Jo-Wilfried Tsonga by the mirror opposite score 7-6 4-6 7-6 7-6, for a set-unit reversal. For a true letter palindrome, simply list both results from Kyrgios’ side. This gives, in order,

76 46 76 76 + 67 67 64 67.

Furthermore, the two matches happened back to back in the tournament or, historically, at the same time. And taking the phrase **back to back** (itself a word-unit palindrome) literally, the players would show **reversed anatomies**, a sort of visual palindrome, symmetrical like two bookends!

If you think this over-interpretation is poop, don’t **poo poo poop!** Where would you be without it? **Stuffed!**

• ADJACENTS, or READING THE DICTIONARY AS PROSE AND POETRY
For a fun solitaire or party game, look for meaningful runs (phrases, sentences) of three or more consecutive words or their inflections, in the same order. I recommend a pocket dictionary for better results. This one got me started: **seminal seminar semination** (planting the seed of a seminal idea at a key colloquium). It’s easy. I found 30 in just the first half of the A’s in Collins Pocket D.

Best examples:

“Abolish, abominate Aborigines!” mentality of many early (and some current) white Oz settlers

**Abstruse absurdities abound.** sigh of the times (No typo, sigh!) abound = inflection of abundant

**Acknowledge acme acne.** Admit it—zits explosion!

**Actuate acumen, Acupuncture!** asking a lot of traditional medicine (but not too much, I suspect)

**Adolescents adopt adorable adornments.** Much ado- about nothing. *(Adorable??)*

**aerospace: aesthetics afar** ethereal sky beauty

**aged’s Agenda Agent’s aggrandisement** robbing the old and defenseless

**Ahoy! Aid aide’s AIDS ailment!** You! Donate to hir treatment fund **now!**

**Alchemy Alcohol Alcove** name of a liquor store in la-la land

**Aliens alight alit.** Immigrants get drunk en route, or ‘coming out’ UFOs land fully aglow.

**aloneness alongside aloofness** the hermitic life, or life at the top

**AMOEBAE AMOK AMONG AMORAL AMOROUS AMORPHOUSNESS** *(headline)*
So that’s what those frisky shapeshifting protozoa get up to when we’re not looking!
In surveying the dictionary for S anagrams I was reminded of the remarkable “friendliness” of S as an initial letter. Of all consonants it accepts the most second letters. It’s also by far the busiest initial overall in dictionary pages. I shall deal only with initial S- but assume that -S is also the friendliest terminal letter because of plurals, verbs, -ness, -less, -ous, et ceteras). Yet it’s ordinary enough as an internal letter that it’s only the 7th most common letter overall (etaoin Shrdlu).

Defining “friendly” second letters as those that produce an abundance of words, there are 16 for S: the 6 vowels plus 10 consonants: -CHKLMPQSTW. For comparison, the number of friendly second letter consonants following other consonants are: 5 after PT, 4 Gk, 3 BCD, 2 FW, 1 R, 0 HJLMNQVXZY. Aside: Vowel Y- accepts 13 consonants, none friendly. The other five vowels can accept Scrabble words with every consonant in second spot, many unfriendly, except Iq Uq Uw Uz.

As “unfriendlies” (S-BDFGJRSVXZ) I count M.E. and other archaic and obsolete spellings, several only in OED (thanks to Jeff Grant), but exclude abbreviations, capitalised words, and initial ’S, S’ and S-hyphen words. It turns out that S can form words with any second letter except X. It can form Scrabble words (listed below) with all but 3 second letters: SXZ. Many unfriendlies are unaltered foreign words listed in English dictionaries. Most others (eg, minerals) are eponyms of proper names: Sz-, E. Europe; Sv-, Scandinavia and Caucasus; Sr-, India.

The friendliest letters have between 80 (Sq-) and over 600 (St-) basic Scrabble words, excluding inflections. S-T (ie St-) has more than any S-vowel words. S-CHP have more than any vowel except S-A (roughly 400), which they nearly match, surpassing S-EIOUY at 100-300 words.

Aside: the most popular second consonant overall is H, with L and R close behind. Yet H is not a friendly second after any of the vowels except A at 25 (E 2, I 1, O 6, U 3, Y 0).

These (+ inflections) are all the Scrabble S words with unfriendly second letters.

sbrirro Italian police officer
sdain/e, sdayn, sdein, sdeign/e obs. forms of disdain, <Ital.
sdrucciola antepenultimate accent placement in rhyme, Ital.
sferics spherics: 1. spherical geometry/trigonometry; 2. a storm detector; 3. “atmospherics”
sforzando, sforzato in music: strong accent, Ital.
ssfumato interbleeding colour edges in painting, as used eg by DaVinci, Ital., Ital.
sgraffito a carved pottery style or technique, Ital.
sjambok (n., vb) (to) rhino-hide whip, S.Af.
sjoe! S.Af. exclamation of surprise
sradhha, sradhha Hindu ceremony and faith, = Shraddha
sri = Shri, Hindi Sir or sir
svarabhakti inserting a vowel sound, esp. between R or L and a consonant, in Sanskrit, etc.
svaraj swaraj, self-government in British India, < Sanskrit
svastika swastika, Sanskrit for well-being (!)
svedberg ultracentrifugation time unit, a Swedish eponym but uncapitalised
svelte gracefully slim, French < Ital.
The periodic table of the elements contains fourteen entries, each of whose chemical symbols consists of a single letter: B (boron), C (carbon), F (fluorine), H (hydrogen), I (iodine), K (potassium), N (nitrogen), O (oxygen), P (phosphorus), S (sulfur), U (uranium), V (vanadium), W (tungsten), and Y (yttrium). These letters constitute a pool from which words of minimal length eight can be formed. Such words will henceforth be dubbed *wisconsin words*, since this state’s name can be constructed by bonding some of these letters together.

Fifteen such specimens, on display below, have their letters arranged in non-descending alphabetical order. If you are able to unscramble them to reveal the actual words, you are legitimately entitled to be called a “big cheese”!

PUTATIVENESS - WHEN IS A WORD NOT A WORD?

Darryl Francis
Brampton, Cumbria, England
darryl.francis@yahoo.co.uk

In an earlier article (Zipwords – aka Alternades), I noted the word PUTATIVENESS as a 3-ply zipword. That is, if the letters are written zigzag fashion, as below, every third letter can spell out a genuine shorter word. Thus:

```
  P   A   V   E  
   U   T   E   S  
     T   I   N   S  
```

The three shorter words are PAVE, UTES and TINS.

As far as I can tell, PUTATIVENESS first appeared in Dmitri Borgmann’s Language on Vacation. But I wouldn’t be surprised if it had previously appeared in a trinade puzzle in The Enigma, the journal of the National Puzzlers League, a source which Borgmann plundered extensively for his book.

In my earlier article, I noted that PUTATIVENESS isn’t listed in any dictionary. It’s not in Websters Second and Third Editions, the Oxford English Dictionary (OED), the Random House Dictionary, Funk & Wagnall’s New Standard Dictionary, the American Heritage Dictionary, nor even on the bang up-to-date Unabridged Merriam-Webster website (www.unbridged.merriam-webster.com).

I note that the Alpha Dictionary website (www.alphadictionary.com) says “the noun putativeness is available, if needed”.

How do dictionaries define PUTATIVE, and from those definitions can I figure out a reasonable definition for PUTATIVENESS? Webster’s Third defines PUTATIVE like this: “commonly accepted or supposed: reputed: assumed to exist or to have existed: hypothesized: inferred”. And the OED has this: “that is commonly believed to be such; reputed, supposed; imagined; postulated, hypothetical.” Further, Webster’s Third has this definition for the suffix -NESS: “state: condition: quality: degree”. More extensively, the OED defines -NESS in this way: “forming abstract nouns from adjectives, participles, adjectival phrases, and (more rarely) nouns, pronouns, verbs, and adverbs.”

Putting all this together, I think that PUTATIVENESS could reasonably be defined like this: “the state or condition of being reputed, supposed, commonly believed, imagined, postulated or hypothetical.”

In passing, it’s worth noting that the OED lists the noun PUTATION, with the definition “The action of considering or reckoning; supposition, estimation”. Webster’s Second Edition also lists PUTATION and has a similar definition, but Webster’s Third doesn’t see fit to include the word. Perhaps PUTATION and PUTATIVENESS should be considered synonyms...
So, is PUTATIVENESS a real word or not? No major dictionaries have it listed, but it can be found in a variety of quotes on the internet. Let’s take a look at some of these, and see if they accord with my definition. Here are some of the occurrences found.

1. The first occurrence of PUTATIVENESS that I found was in a book entitled *Subjects, Citizens and Law: Colonial and Independent India*, edited by Gunnel Cederlöf and Sanjuktka Das Gupta (published by Routledge India, 2017). Part way through the book is this sentence: “The putativeness of the formation also manifests once we move away from the normative and instrumental understanding of measurement and see it ‘in action’.” I wondered what was meant by “the formation” in the quote, and managed to figure out that it was the “putative formation of juridical agro-ecological subjecthood based on the idea of proprietorship (aided by measurement)”. I was still none the wiser given this tortuous academic phraseology, so decided to give up trying to embellish it further!

2. PUTATIVENESS can also be found in a 1985 opinion filed by the Supreme Court of Kansas. The law.justia.com website has this: “The statute before the Court embodies elements of putativeness and discrimination which violate the rights of citizens to equal treatment under the law.”

3. Dan Graur is the author of a book entitled *Molecular and Genome Evolution* (2016). Dan has a very low threshold for hooey, hype, hypocrisy, postmodernism, bad statistics, ignorance of population genetics and evolutionary biology, and hatred of any kind. He writes about these subjects on his tumblr blog, which is a diary of his peeves, dislikes, antipathies, annoyances, and random feelings of contempt. It can be found at judgestarling.tumblr.com. On part of his blog he has written: “For a valid publication of a species (sans *Candidatus*), bacteria must be isolated, cultured, described, and deposited in a bacteriology culture collection. Please note that there is no requirement that the genome of a bacterium needs to be sequenced in order for the name to be valid or *Candidatus*-less. If a bacterium cannot be maintained in a collection, it is slapped with the prefix *Candidatus* as a mark of temporariness and putativeness.”

4. Drowning in Eternity is a website dedicated to the review of English syntax – check it out at www.drowningincontinuity.estranky.cz. In a discussion about clauses on the website can be found this quote: “Result clauses: introduced by subordinators *so that* and *so*. From purpose clauses they differ by absence of modal auxiliary, that purpose clauses need for because of their putativeness.” (Is the text slightly mangled there? Is there an unnecessary word *for* in that quotation?)

5. In 2004, one Roxanne Mitchell submitted a paper for her doctor of education degree at Oklahoma State University. Her paper was entitled *The Effects of Trust on Student Identification and Academic Performance*. The paper can be found at digital.library.okstate.edu. The paper uses PUTATIVENESS twice. Its first appearance is in this lengthy sentence: “Empirical research in the area of student identification with school has focused on antecedent conditions necessary for the development of
identification such as prior academic achievement, student’s prior experience of participation in school and school related activities, the structural environment of the school (school size and racial/ethnic composition of the school), and the regulatory environment of the school (degree of rigidity of school rules and disciplinary putativeness)”. And the word crops up a second time in this quote: “The findings from these studies have shown that most of these factors do matter and do have a significant effect not only on student identification with school but also on academic performance. Interestingly enough Finn and Voelkl (1993) found that disciplinary putativeness did not have an effect upon student identification.”

6. In its fall 2006 review, the Long Island Education Review (at www.scopeonline.us) carried a similar item about student identification. It ran: “Empirical research in the area of student identification with school has focused on antecedent conditions necessary for the development of identification such as prior academic achievement, student prior experience of participation in school and school related activities, the structural environment of the school (school size and racial/ethnic composition of the school), and the regulatory environment of the school (degree of rigidity of school rules and disciplinary putativeness).” You’ll not be surprised to find that the author of this item was the same Roxanne Mitchell mentioned in item 5 above!

7. In 2007, the Pacific Rim Law & Policy Journal Association published an article entitled When the Price is too high: Rethinking China’s Deterrence Strategy for Robbery, by Peter Nestor. Check it out at digital.lib.washington.edu. The article carried this sentence: “Another scholar noted that the investment in ‘sheer putativeness’ in strike-hard campaigns is a ‘futile strategy’ to deter crime; rather, the Party uses it to appear tough on crime and shore-up its legitimacy.”

8. Market Place Troy Media (www.marketplace.troymedia.com) is a website dealing with business and recruitment issues. In 2016, it ran a piece by one Allan Bonner which said: “But many quotes are unattributed, interviewees’ alleged quotes go unchallenged, and so do apparently made up quotes from hypothetical oil and pharmaceutical company spokespeople – ersatz putativeness.”

9. Laird is a smart technology company based in Missouri, US, and London, England. On its website (www.lairdtech.com) it has extensive terms and conditions of sale, presumably for prospective customers. One of the paragraphs runs thus: “17.4 If any provision of these Conditions or a Contract/Order formed pursuant to it is found by any court, tribunal or administrative body of competent jurisdiction to be wholly or partly illegal, or invalid, void, voidable, putative (futile), ineffective or unenforceable it shall, to the extent of such illegality, invalidity, voidness, voidability, putativeness (futility), ineffectiveness or unenforceability, be deemed severable and the remaining provisions of the Contract and the remainder of such provision shall continue in full force and effect.”

10. And finally, there is a Facebook public group named Algarve Portugal Rare Birds. In April 2017, Martin Hodges commented on the possible sighting of the bird Limicola
*fal·ci·ne·lus* with this short message: “I agree with the *putative-ness*!!! Better to be safe than sorry.”

So there we have it – real world examples of the word **PUTATIVENESS**, all unrelated to its logological property of its three zigzag words **PAVE**, **UTES** and **TINS**. From these quotes, I think that my definition of **PUTATIVENESS** as “the state or condition of being reputed, supposed, commonly believed, imagined, postulated or hypothetical” is reasonable.

Further, do these internet quotes for **PUTATIVENESS** make it a real word? If so, does that highlight the deficiency of dictionaries in not listing and defining such a word? What makes a word a real word? Over to the reader …
A DOUBLE HAIKU FROM HOMOGRAPHS

ANIL
Perth, Australia

bay, bay, bay, bay bay
sea inlet, herb tree,
window view, reddish brown hound*
howling at the moon

This picturesque poem forms two haiku. Its title is five unrelated homographs. It arose out my “Homograph Puns” article in this issue. First it’s a classic English haiku of 17 (5-7-5) syllables. Second, the 5 word title itself meets the criteria for being a post-modern “haiku”, which scraps the 17 element and all rhythm and seeks minimal length evocations devoid of the “frills” of classical poetry. My title is such a five word poem. But it needs the 17 version to be translated, for all but very imaginative readers.

* Bay as a noun is usually applied to horses, but not obligately. A bay when talking about dogs can be a bay-coloured hound, as here. If you object, would you believe changing “hound” to “horse”—a bay horse that bays at the moon? I never met one of them. Nor I believe did Sherlock.
HOMOGRAPH PUNS

ANIL
Perth, Australia

Unrelated HOMOGRAPHS can make amusing pairs: cricket cricket, latest sports feature at the Flea Circus. A to C alone in Chambers Dict. Etymol. ('88) revealed maybe two hundred pairs, most of which could by twist be interpreted meaningfully, if at times fancifully like cricket. Here's a selection. Verbal phrases are punctuated as sentences. The Multiples are presented as a Quiz.

Alight alight. to land lit up (Extra drinks on the flight in? Or is this Rudolph Reindeer here?)

Aye? Aye! Forever? Yes! (Long live the aye-aye lemur, still being killed as a harbinger of evil!)

ball ball formal sex dance, dress optional (Possible influence: ball = dance, several “dance” = sex: Cassell Dict. Slang ('98); but it says the primary derivation of ball = sex is from testicles.)

bank bank a financial institution on the edge, where the money can suddenly go down the river (They all seem to be hogging the river lately. 2008 redux?)

bark bark a tree trying to scare off the loggers

Bats bats animal cruelty

Boils boils. Drops pus-filled swellings into steaming broth. (Why?? For flavouring, of course.)

boom boom! Someone didn’t duck the swinging mast’s spar!

bridge bridge card playing over the river

Trump rules: If wind blows a card away, play on! Last card left wins. (It’s a trump.)

brogue brogue a stylish shoe with an Irish accent (widely conjectured to be related: CDE)

Brush brush. = Scrub scrub. Clean up the environment manually. (What, an acre per year?)

Hey, if that’s one acre per person, together we could clean up 7 billion acres a year. That’s a lot. I crudely calculate that we could clean up 4 Australias or one Africa per year. If we kept it up for 5 years we’d have brushed and scrubbed Earth clean clean. Let’s do it!!!

buff buff an enthusiastic nudist or manicurist (Most likely a nude manicurist. If not for incest laws s/he could also have buff hair or skin and be in buff muscle tone, but no, both are kin to buff naked.)

bull bull a papal decree that’s full of you know what (Hey, it’s only a theoretical possibility!)

bunk bunk a fake bed or a bed of nonsense (Buncombe County NC has a lot to answer for.)

bust bust striptease raid, or an intimate body search found contraband

butter butter the high-hopes ram who thought he could break thru the EU butter stockpile

card card the joker (I cheated. These two are related. But they’ve acquired very different meanings so I thought it still a good pun. An oldie, I imagine.)
carp carp  bichir's bitching  (I've promoted the bichir fish to Honorary Carp Representative.)
champ champ  winner of the World's Fastest and Noisiest Chewer contest
cleaving cleaving  divorce
cobbler cobbler  a maker of cobblerstones out of fruit pies  (my wife!)

Console console.  Don't whack your TV when it dies on you! Give it a caring, sympathetic pat and words of comfort. (And, if you're sincere, call the repairperson.)
corn corn  a silly joke about my sore toe  (Don't laugh! It hurts when you laugh.)
counter counter  a New Age stall at the markets (where they reluctantly have to count the filthy lucre)
curry curry  ingratiate oneself to gain flavour

* QUIZ: MULTIPLES  These mind-twisters are all mutually unrelated homograph constructs. You are to "translate" them as coherent phrases or sentences, with a different unrelated definition for each instance of a word. You add the punctuation if any. My answers below. Others are possible.

ash ash asp asp
bit bit bit bit
blaze blaze blaze
bore bore bore
bound bound bound bound
bow bow bow
box box box
buck buck buck buck
butt butt butt butt
chap chap chap
char char char
chase chase chase
chuck chuck Chuck chuck chuck chuck
con con con con
• NON-HOMOPHONES All the above homographs are also homophones (sound-likes) except bow bow bow in the multiples. I found only these few other unrelated heterophonic homographs.

agape agape stunned by a show of brotherly love in 2018

Are are. They = 100 m². (The two words are optionally also homophones.)

bass bass a fish that plays in a band or sings in a choir (School activities?)

buffet buffet bump the cabinet (But please don’t hit Jimmy the singer/songwriter!)

cashier cashier the dismissal from the army of a more cashed up offender
(Did he win big money off his officers at cards by allegedly cheating?)

• My ANSWERS to the Multiples. The numbers clarify word order by identifying which bold words in the quiz correspond to which definitions in the verbal answers (see bound). Once you know the number of each meaning, the numbers are the Answers.

Ash ash, asp-asp. Burn to ashes two trees, an ash and an asp housing an asp snake. 1 2 4 3.

Bit bit, bit bit. Bit off some computer-bits, but only a small amount. (bit³ = but, Scot.) 1 2 3 4.

How, you ask, can I bite computer bits? I can’t actually, I lack the teeth for it. But hackers can do it.

Blaze, blaze, blaze. Mark a tree, burn it down, then proclaim your misdeed as if bragging. 1 2 3.

Bore bore bore. Endured a tiresome person who bragged incessantly about holes he’d drilled. 1 3 2.

bound bound bound bound headed toward¹ jumping² over a tied-down³ fence 4 3 4 2 1.

bow bow bow a kneeling at the archer’s weapon carved on a ship front (New religion? Old!) 3 2 1.

Box box box. Fist-punch a container made from the wood of a certain tree. (Ouch!) 1 3 2.

buck buck buck buck responsibility for a cheap male prostitute’s obscene sawhorse 4 1 2 3.

I couldn’t find out just what made his sawhorse obscene. Any ideas? I never got into sawhorses. Did I miss out on a lot of fun?

butt butt butt butt the barrel where one’s scorned rear end is head-butted 4 1 2 3.

chap chap chap the hog jowl of a cracked-lips man (or v.v.) 2 3 1 (or 1 3 2).

Char char char. Burn the charwoman’s tea. (char = cha, chai, tea: Br.) 1 2 3.

Chase chase chase. Seek to hire a pipe-groove engraver. (They’re hard to find, I hear.) 1 2 3.

Chuck chuck Chuck chuck (chuck?), chuck. Throw provisions (beef?) to a woodchuck called Chuck (Charles), then touch it playfully under the chin. 1 4 (5?) 2 3 6. (4, 5 & 1, 6 possibly related)

con con con con against the study of a jailbird’s trickery 1 3 4 2.
CORNAGES (FUNNY WORDS 6)

ANIL
Perth, Australia

My previous WW excursions into wordmaking appeared in 6-16, 7-162, 11-177, 12-146, 13-30. On Google check, most here are original. A few have more sober uses unrelated to mine. Cornage, for example, is my word for a corny coinage, but it's also an old feudal tax on horned cattle.

airotic pretending to be sexy to your mirror

beattitude the blessed kids problem!
(‘Blessed’ fits with one or two syllables.)

brute fork eating meat without a knife —

Closet God “Just you wait!”

Coed us, interrupt us. (story of my sex life)

fishyologist a physiologist who fudges data

ho-ho ho a prostitute laughably beyond her use-by date (She now resembles Santa Claus—ho ho ho!)

homogenius Us, after GM brains make everyone equally brilliant—and just alike! This would fulfill the unpunny prophecy of online Urban Dict., which defines homogenius as a superintelligent human.

litterature junk writing (OMG, that includes all of French Litterature!)

myopinion my short-sighted view

niferous tubule two seminiferous tubules join

non-secateurs pruning scissors that got stolen, or don’t work and won’t follow reason

Phathom the ghost who swims

right to bare arms constitutional entitlement to go sleeveless, despite offensive tattoos

snaked the story of Adam and Eve in one and three syllables

swollen paranoid glands clinically nervous and suspicious

“two busy!” mother with twins

vole love They’re a lot better at it than we are. And more faithful. Vole Love is the subject of an actual scientific study, voles being so monogamous. Bless these li’l fake mice! Vole, evolve! Lo, love!
INSTRUCTIONS TO AUTHORS

Word Ways is interested in receiving original articles (non-fiction, fiction or poetry) relating to recreational logology. All articles should be sent to the editor, Jeremiah Farrell, 9144 Aintree Dr., Indianapolis, Indiana 46250 (wordways@butler.edu).

Authors are encouraged to send computer-ready articles in Microsoft Word with the following specifications:

- Title: 14 pt Times New Roman BOLD
- Text: 12 pt Times New Roman
- Page Size: 7 inches horizontal, 9 inches vertical

Diagrams and the like should be drafted in black or India ink in a form suitable for photo-offset.

In non-fiction articles, the responsibility for the accuracy of any statement rests primarily with the author. The general scope of any investigation should be defined: for example, a statement that words have been taken from the Merriam-Webster Collegiate Dictionary or the Merriam-Webster Unabridged Dictionary, Third Edition, or place names taken from the Times Index-Gazetteer of the World. If a word or name comes from an unusual source, this should be identified. Footnotes in general should be avoided; references can be given either in the text or at the end of the article.

Word Ways makes every effort to ensure the information published in this journal is original and accurate, but cannot accept any legal responsibility for any errors, omissions, lifted content, or otherwise.

Copyright Information

Word Ways cannot accept copyrighted material. Instead the entire issue is copyrighted by the Editor with rights going back to individual authors after the issue is published. We hope only that they mention Word Ways in any further publication of their article. If we decide to reprint any previously used article, we will contact the author for permission.

To Subscribers:

We are pleased to offer an electronic version of Word Ways to our current and potential subscribers for free. [Print copies were discontinued after the November 2017 issue.] This is a joint effort between Word Ways, Butler University Libraries in Indianapolis, Indiana and Berkeley Electronic Press in Berkeley, California. Access will be through the Berkeley Electronic Press/Digital Commons. All back issues are available online.
