

MIAMI SEQUENCES

In *Removing Embedded Letter Patterns* (WW98128), I removed **tautonymic sequences** and **palindromic sequences** from inside a word, to make another word by joining the letters remaining at the beginning and end of the original word. Thus, when the tautonymic sequence *atat* is removed from CATATONIC, the *c + onic* = CONIC; and when the palindromic sequence *illi* is removed from MILLIONTH, the *m + onth* = MONTH.

Part 1 of the current article repeats this exercise, removing embedded **Miami sequences** (12312).
