Open Access May Lead To More Citations

Past articles on open access have argued that publishing your scholarship in an open access journal may lead to higher citation counts for your work. The [latest work](#) of Xia, Myers, and Wilhoeite, which appeared in a recent issue of the *Journal of Information Science*, supports this hypothesis.

“This research examines the relationship between multiple open access (OA) availability of journal articles and the citation advantage by collecting data of OA copies and citation numbers in 20 top library and information science journals. We discover a correlation between the two variables; namely, multiple OA availability of an article has a positive impact on its citation count. The statistical analysis reveals that for every increase in the availability of OA articles, citation numbers increase by 2.348.”

Xia, J., Myers, R. L. & S. K. Wilhoeite. (2010). Multiple open access availability and citation impact. *Journal of Information Science*, 36(6), x-x.

Please see these articles for additional information regarding how open access can help increase your article citations:

- [The Open Access Citation Advantage](#) by Swan.
- Lawrence's [Online or Invisible?](#)
- [Open Access Increases Citation Impact](#) by Gargouri and others.

So the next time you are looking for a publishing opportunity you might want to consider submitting to an [open access journal](#).

Academia.edu: A Second Way To Promote Your Selected Works

Need a second place to promote your work online? Try [Academia.edu](#)! This free social networking site is designed for academics. Better still, you can take the persistent URLs from your articles in [Selected Works](#) and add them to your [Academia.edu profile](#). What this means is that you can create [another way](#) for Internet searchers to find your Selected Works articles. More online access points to your Digital Commons scholarship may lead to increased download counts and increased citations of your work.
