Do Women Generate Better Returns?

Some prior research suggests that women make for better investors, primarily because they generally trade less than men (meaning lower transaction costs). However, a new fund aims to exploit the benefit women may provide as board members. The Barclays Women in Leadership ETN will invest in companies with a female CEO or a board that has a membership of at least 25% women. [See here for an article that discusses the new fund \(WSJ\)](#).

[See previous post \(ETFs vs. ETNs\)](#) for a discussion of the fund structure.
