GIANT SYNONYM SQUARES

EDWARD R. WOLPOW
Brookline, Massachusetts

In "Synonym Squares" in the August 1979 Word Ways, Tom Pulliam gave examples using Websterian words of four to eight letters in length. If one goes beyond Webster, it is possible to build squares that are considerably larger. The first synonym square exhibits twelve words or phrases pertaining to NEUROANATOMY (read downward on the tenth letters); nine are in Webster's, and the other three (arytenoideus, axodendritic, ependymocyte) are in standard medical references. The second synonym square exhibits fourteen generic names for drugs in current use; all are major headings in the Generic and Chemical Name Index of the Physician's Desk Reference. The word PHARMACEUTICAL can be found by reading downward on the eighth letters.

LATERNASINUS
ARYTENOIDIESUS
DORSALCOLUMN
TRIANGULARIS
PARIELALLOBE
SPONGIOBLAST
CENTRALCANAL
ERGASTOPLASM
AXODENDRITIC
SUBARACHNOID
HYPOTHALAMUS
EPENDYMOCYTE

CARBETAPENTANE
CHLOROTHIAZIDE
CHLORHALIDONE
CHLOROPROCAINE
COLISTIMEHATE
DROMOSTANOLONE
CHLORCYCLOZINE
ACETOPHENAZINE
PHENYL BUTAZONE
BECLOMETHAZONE
CHLORQUINALDOL
DEMECYCLINE
PHENYL CARBINOL
SPIRONOLACTONE

The seventeenth place of SESE the first fiftieth land's and seven seventeenth waters.
The seventeen words in the third synonym square are excellent examples of SESQUIPEDALIANISM (read downward on the fourteenth letters); the first fifteen words are in Webster's, but the last two are in Dorland's and Stedman's medical dictionaries. As an added restraint, the seventeen words are in alphabetical order, beginning with different letters.

ANTIMATERIALISTIC
BRADYKINESIA
CONTRAPROGRESSIST
DIOXYQUININE
ELECTROMETALURGY
FIBROPERICARDITIS
GASTROHYPERTROPHY
HEMIHYPERESTHESIA
MENINGORHACHIDIAN
NONCRYSTALLIZABLE
OVERARTIFICIALITY
PALEOETHNOLOGICAL
QUADRARTICULATED
REORGANIZATIONIST
SEMIHISTOPHICAL
THROMBOCYTOPATHYINS
UTEROCYSTOSTOMIES
