ANTS ARE ALL OVER

ROBERT C. LAYTON
Mechanicsville, Virginia

This is a story of an enchanting young man, Anthony Santiago, an immigrant from Antwerp, who became a very important contributor to our society as a result of his penchant for inventions. He was responsible for the development of an antiseptic that rendered many malignant diseases dormant. He created a safety lantern for use in anthracite mines, a sextant that received world-wide acclaim, and he helped perfect a disinfectant for commercial use. His discoveries included a bullet-proof canteen that is still being used by the military, and an antenna he developed for a local power plant that is now being distributed nationwide. He remains a consultant for the manufacturer. Anthony is currently working on a new design for a fire hydrant that will double the water output while keeping a constant pressure.

Here is proof of how it once was in our country when immigrants came to contribute to our society instead of arrogantly supplanting to get on the dole.

Anthony is a distant descendant and confidant of Anton Antonelli, the famous and gallant anti-aircraft expert from Canton, Ohio, who had a fantastic career in aviation.

Arriving in this country in baggy pantaloons and a torn shirt, he had only scant funds. Anthony became an occupant of a shanty outside Chantilly, Virginia. It sat on little more than a vacant lot. Despite these less-than-enchanted surroundings, he was mindful of all that went on around him. He immediately began to involve himself in activity. He planted a large garden which brought many new crops to the area including eggplant, cantaloupe, and currants. As a result of his vigilant approach this experiment produced such luxuriant quantities that he was able to earn money selling his surplus to local merchants. During the winter months he tried his hand as an anthropologist assistant and worked for the Appellant Court, filling a position vacated by the retirement of Manti Mantlo. He was awarded the position over three other applicants.

During this period Anthony was more than a nonchalant observant of religious history. He was reported to be celebrant at the time, a part of his Protestant upbringing. He gave a new slant to this concept in an elegant talk on virtue. Following his presentation, he said he would be a participant with others in the pursuit of the goal to be triumphant in dismantling prejudice and working with peccadillants.

Anthony was never hesitant to take a stand. He was cognizant of the advantages and disadvantages of doing so.
Anthony Santiago, an important contributor to inventions, is credited with the safety lantern that is still developed for nationwide use.

Anthony's claim to fame was interrupted by a call from the Army. He served in the infantry as a lieutenant and his flamboyant leadership earned him instant recognition. He was unfortunately wounded by enemy gunfire. Luckily his canteen prevented the bullet from doing significant harm. During his convalescence he studied Anthropology more seriously and drafted his plans for the bullet-proof canteen that would, as previously mentioned, become one of his famous inventions.

After his military career, Anthony met Samantha Cantrell. He was an escort at her debutante party and was instantly impressed by her pleasant manner and brilliant radiance. He wanted to see more of her. A change came over his thinking and the passionate juices flowed. A romantic courtship followed. The desire to right the world gave in to the relationship, and they were married.

Their offspring was born in the middle of the alterations. They set the nursery in the recently-completed atrium. The infant took the name of Anton in memory of Mr. Antonelli, whose picture was proudly displayed over the mantel.

Anthony and Samantha were appreciative of their abundant good fortune and conversant with the role their steady hard work played in its attainment.

Granted things have changed, but that's the way it used to be with immigrants to America.
