BREAKUPS

STEVE KAHAN
Hollis Hills, New York

When Neil Sedaka recorded “Breaking Up Is Hard To Do” many years ago, he surely did not envision that the lyrics would be an apt prophecy for a logological exercise. Each of the “equations” presented below results from the dissection of a single word into two different sets of shorter ones. For example, CARDAMOM, an Indian spice, can be fractured into both CAR + DAM + OM and CARD + A + MOM.

Prompts have been supplied for the constituent parts of each answer. Definitions for the ten unbroken words have been pooled as well, although their ordering does not correspond to that of the ten questions. Perhaps if Mr. Sedaka sees this piece, he’ll be inspired to pen a new song, entitled “Reassembling Is Even Harder To Do.”

1. mend shoes + rock = corn core + sanctified + undivided
2. unspecified quantity + in what place = consequently + small alley + present
3. lea + carefree adventure = alcoholic beverage + nocturnal bird + large boat
4. cloak + type of anesthetic = toward a given state + obtain + possessive pronoun
5. delicate fabric + appraised = resinous secretion + time period + spread to dry
6. complain fretfully + item in a ledger = wheeled vehicle + fenced enclosure + attempt
7. first-rate + self-esteem = eat an evening meal + before + proceed
8. formally listen + cardinal number = that man + attained skill + printer’s measure
9. foreign + attending + charged atom = first lexicon item + falsehood + country
10. blemish + imaginary unit + money = family member, informally + manipulate + ancient

A. estrangement
B. psyche division
C. naturally rounded paver
D. encourage
E. woodworker’s forte
F. unknown place
G. showy orange or yellow flower
H. torn
I. North American songbird
J. simultaneously
